

National Carbon Offset Standard Carbon Neutral Program Public Disclosure Summary

An Australian Government Initiative

Meridian Energy Australia Group

Public Disclosure Summary

1st July 2014 – 30th June 2015

Australian Government
Department of the Environment

Summary

Meridian Energy Limited has a proud heritage of harnessing our earth's energy in generating affordable electricity every day – enough to supply more than one million homes. We are proud to say we are Australasia's largest entirely renewable electricity generator and retailer. Our company has made a conscious choice to invest in our children's future by not investing in polluting fossil fuel based plants. We seek to add value in a sustainable way by minimising the resources we draw on in going about our business. We seek to ensure the choices we make offer good value, to ensure we can keep our energy affordable.

In Australia, Meridian generates electricity from its own wind farms which is sold into the National Energy Market (**NEM**). We also retail electricity, bought from that same market under our iconic Powershop brand. This Public Disclosure Statement (**PDS**) supports an application for Organisational accreditation under the National Carbon Offset Scheme that covers Meridian's generation and corporate activities. It details for the FY2015 (**Base Year**), the total of our existing emissions from this part of our business, how we define and measure those emissions and how we use our purchases of GreenPower and carbon offsets to reduce that impact.

Our retail business, Powershop, also offsets all emissions associated with the quantity of electricity purchased for sale to its customers. Powershop is now also seeking to have this voluntary carbon offset program recognised as an accredited Product under the National Carbon Offset Scheme and a separate PDS has been prepared for that application.

By seeking accreditation at both an Organisational and Product level, all Meridian Energy Australia's stakeholders will be assured they are supporting a better future through lower greenhouse gas emissions.

1 Organisation and Product Information

Table 1: Organisation and Product Information

Organisation Name	Meridian Energy Australia ¹	
Name of the subject(s) of certification	Meridian Energy Australia Corporate Group	
Type of certification (tick all applicable)	<input checked="" type="checkbox"/> Organisation <input type="checkbox"/> Product/service <input type="checkbox"/> Part of organisation <input type="checkbox"/> Event	
Reporting year period	1 st July 2014	30 th June 2015
Emissions in this reporting year	272 t CO ₂ -e (reduced to 0 t CO ₂ -e by offsets)	
Base year period	From 1 st July 2014	30 June 2015
Emissions in the base year	272 t CO ₂ -e (reduced to 0 t CO ₂ -e by offsets)	

2 Description of Organisation Activities

Meridian Energy Limited is Australasia's largest entirely renewable electricity generator/retailer and New Zealand's largest electricity generator. The Meridian Energy Australia group of companies undertakes Meridian Energy Limited's electricity generation, wholesale and retail activities in the Australian market.

There are four companies trading in this group that are sources of emissions:

- Meridian Energy Australia Pty Ltd
- Mt Mercer Windfarm Pty Ltd
- Mt Millar Wind Farm Pty Ltd
- Powershop Australia Pty Ltd

The group also includes several special purpose and non-trading legal entities.

¹ Meridian Energy Australia comprises all companies incorporated in Australia which share a parent company with Meridian Energy Australia Pty Ltd.

Further information about Meridian Australia's corporate structure can be found at appendices 1 & 2 and also at www.meridianenergy.com.au.

3 Organisational & Geographic Boundary/ Scope & system Boundary

The organisational boundary determines the parameters for GHG reporting in the Meridian Energy Australia Group GHG inventory. The boundaries were set with reference to the methodology described in the ISO14064-1 standard. The boundary encompasses the operations owned or controlled by Meridian Energy Australia, its subsidiaries, and associate companies in the Meridian Energy Australia Group.

Consolidation approach

Meridian applies the operational control consolidation approach to the Meridian Group emissions inventory. This consolidation approach allows us to focus on those emissions sources over which we have control and can therefore implement management actions, consistent with Meridian's corporate responsibility objectives.

Included in the consolidation are all the operational activities of Powershop, Meridian's wholly owned electricity retailer. However we have excluded from this organisational boundary the actual electricity bought and sold by Powershop to meet its customers' requirements as this element is subject to its own application for NCOS Accreditation in the Product category.

The table in Appendix 1 sets out how each entity in the Meridian Energy Australia Group is treated. Appendix 2 contains a diagram of the Meridian Energy Australia Group corporate structure as at 30 June 2015, which is a subset of the broader Meridian Energy Limited Corporate Group, our New Zealand based parent company.

For further information about the organisation please refer to the Meridian Energy Limited 2014/2015 Annual Report which is available at www.meridianenergy.co.nz.

Defining Meridian Energy Australia "facilities"

Meridian's diverse activities and resulting emissions are categorised into "facilities" in line with Annex A of ISO 14064-1 which requires that the data should be retained in its disaggregated form to aid transparency and to provide maximum flexibility in meeting a range of reporting requirements.

A facility is an operation which, by the nature of its processes or geography, can be separately accounted for. ISO 14064-1 defines a *Facility* as:

"a single installation, set of installations or production processes (stationary or mobile), which can be defined within a single geographical boundary, organizational unit or production process"²

² ISO 14064-1, section 2.21 pg 3

Defining the Individual components of the Facility

There are four trading entities which are sources of emissions in the Meridian Energy Australia Group Facility. The Meridian Energy Australia Group undertakes renewable electricity generation, wholesale and retail activities in Australia and employed 41 FTEs on average during FY2015. A summary of the activities of each of these entities is provided in the table below. There are also a number of special purpose and non-trading entities in the Meridian Energy Australia Group as described at Appendix 1. Please also see Appendix 2 for an organisational chart.

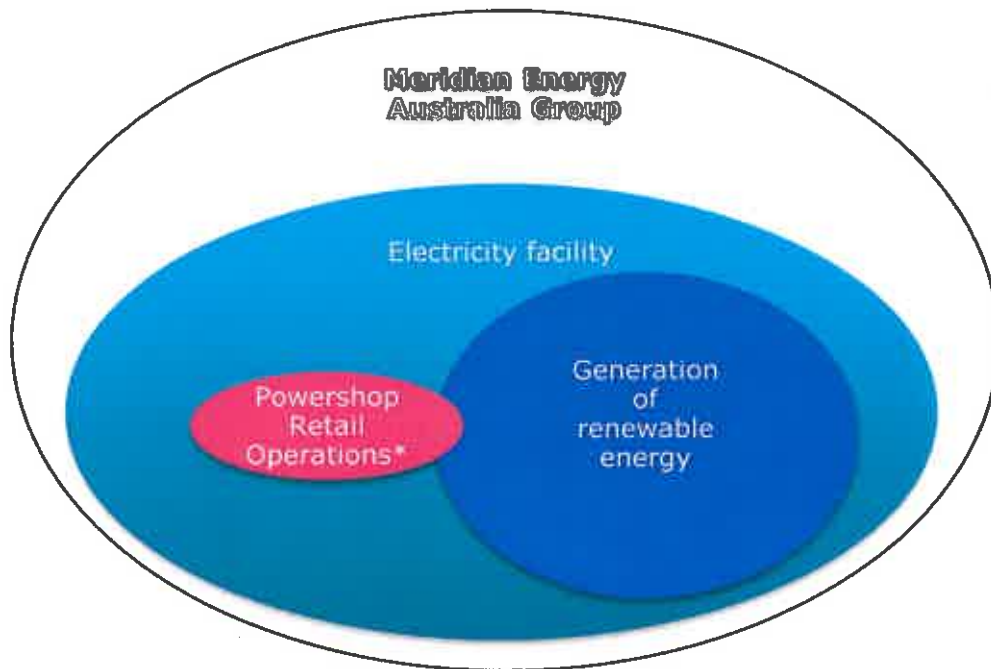

Table 2 – Meridian Energy Australia Facility – Operational Companies

Facility	Description
Meridian Energy Australia Pty Ltd	Meridian Energy Australia Pty Ltd provides corporate and wholesale market services to the Meridian Energy Australia Group.
Mt Mercer Windfarm Pty Ltd	Mt Mercer Wind Farm Pty Ltd owns and operates the Mt Mercer Wind Farm which is located approximately 30kms south of Ballarat in Victoria. The wind farm can generate up to 131.2MW of renewable energy which is sufficient to meet the needs of about 80,000 typical households.
Mt Millar Wind Farm Pty Ltd	Mt Millar Wind Farm Pty Ltd owns and operates the Mt Millar Wind Farm which is located approximately 100kms southwest of Whyalla in South Australia. The wind farm can generate up to 70MW of renewable energy which is sufficient to meet the needs of about 36,000 typical households
Powershop Australia Pty Ltd	Powershop Australia Pty Ltd operates the Powershop retail electricity business in Victoria and NSW which has grown to include approximately 50,000 customers. Further information about Powershop can be found at www.powershop.com.au

Further information about Meridian Energy Australia can be found at www.meridianenergy.com.au

4 Diagram of the Boundary of the Subject of Certification

Figure 1: Facility comprising the Meridian Energy Australia Group

*Excludes the purchase and sale of electricity for Powershop's customers' requirements which is the subject of a separate Product Accreditation application

5 Purchase of GreenPower and Retirement of GreenPower Eligible Large-Scale Generation Certificates (LGCS)

Meridian Energy is an entirely renewable Australasian electricity retailer and generator which only owns and operates renewable electricity assets (wind farms) in Australia which generate GreenPower eligible LGCs.

For its own corporate emissions in the Base Year, Meridian both purchased GreenPower from its retailer, Powershop Australia and surrendered Certified Emissions Reduction Certificates ("CERs"). In future years Meridian may continue to purchase GreenPower, voluntarily surrender eligible LGCs or CERs a combination of each to offset its own emissions.

Green Power Purchases and LGC surrender in the base year were:

Table 3: GreenPower

Type	Volume	Unit	t CO ₂ -e	Status
GreenPower	31,240	kWh	31	Purchased

Table 4: LGCs Surrendered

Details of LGCs Voluntarily Surrendered	
Quantity	Serial No.
0	N/A

Table 5 - CERs Surrendered

Details of CERs Voluntarily Surrendered	
Quantity	Serial No.
400	4,282,190 – 4,282,589

6 Purchase of NCOS Carbon Neutral Products

The organisation is implementing systems to capture its use of NCOS Carbon Neutral Products. In future reporting periods, the organisation will report on its purchase of these products.

7 Total Carbon Footprint

Table 6 - Emissions in Base Year - 2014/2015

Scope	Category	Emissions (t CO ₂ e)
Direct Emissions (Scope 1)	Stationary Combustion	2
	Mobile combustion	129
Indirect Emissions (Scope 2)	Electricity consumption Net of Greenpower purchases	35
Indirect Emissions (Scope 3)	Fuel & energy related purchases	3
	Capital Goods	35
	Upstream transportation & distribution	0
	Business Travel	68
Total Emissions (Scope 1, 2 & 3)		272
Surrender of CERs		(400)
Balance		128

8 Carbon Offset Purchases and Retirement for this Reporting Period

The organisation will utilise NCOS eligible carbon offsets for off-setting all included Scope 1, Scope 2 and Scope 3 emissions constituting our group corporate emissions. Meridian has forward purchased carbon offsets prior to the end of the next reporting period and true up prior to the end of each reporting period. Excess offsets will be banked for future use.

Offsets will also be purchased for use in all of our Australian electricity sales under the Powershop brand, which is separately described in our Powershop Carbon Neutral Public Disclosure Statement. Commencing from 1st July 2014, we have been offering retail customers peace of mind in knowing their electricity purchases are fully carbon offset.

Only NCOS eligible carbon offsets will be utilised in this activity.

8.1 Offset Cancellation

Offsets surrendered for the base period were:

Table 7: Offset Cancellations

Offset type	Registry	Serial number	Quantity (t CO ₂ -e)
CER	Carbon Financial Services	4,282,190 – 4,282,589	400
Total			400

8.2 Surplus Cancelled Offsets

Surplus offsets are to be carried forward (Banked) into the next reporting period for future periods.

Table 8: Banked Offset Cancellations

Offset type	Registry	Serial number	Quantity (t CO ₂ -e)
-------------	----------	---------------	------------------------------------

CER	Carbon Financial Services	4,282,461 – 4,282,589	128
Total			128

9 Emission Reduction Measures

Our emission reduction measures are covered in more detail in the Meridian Energy Australian Emissions Management Plan.

On a year to year controllable basis, key targets for improved management are – business travel, car travel and electricity consumed in premises. While not within Meridian’s control, Meridian is also able to influence the emissions intensity of the market in which we operate.

More than 24% of Meridian Energy Australia’s emissions in the base year emanated from consumption of electricity at our corporate headquarters. Meridian Energy only has partial control in leased spaces, so its activities are confined to efficient procurement of plug in appliances, IT and so forth.

Meridian Energy Australia is setting a target of a 5% reduction in per full time employee equivalent for car and air travel in the 2015/2016 year.

Air travel accounts for 68 tonnes per annum of Meridian’s controllable emissions or around 1.7 tonnes per FTE. We are seeking to reduce this amount to 1.6 tonnes per FTE.

Car Travel accounts for 56 tonnes per annum of Meridian’s controllable emissions or around 1.4 tonnes per FTE. We are seeking to reduce this amount to 1.3 tonnes per FTE.

As a participant in the Australian energy market, Powershop and Meridian are positioned to influence the emissions intensity of this market. We do this both directly, by encouraging our own customers to use less electricity and giving them the tools to do so, and indirectly, by supporting efforts to encourage policies that will drive lower emissions (including supporting the continuation and integrity of the Renewable Energy Target).

Our Powershop retail business will continue to off-set all emissions produced by the generation of all the electricity purchased for sale to our customers. This 100% off-set is in addition to the LGCs surrendered to comply with our retailer obligations under the Renewable Energy Target (RET) and the benefit that is attached to the purchase of GreenPower on behalf of our customers who elected to buy that product.

10 Declaration

To the best of my knowledge and having implemented the quality controls and standards required under the NCOS Carbon Neutral Program and made all appropriate inquiries, the information provided in this Public Disclosure Summary is true and correct.
