1. CARBON NEUTRAL INFORMATION

Description of certification

This certification covers the Australian business operations of In Hearts Wake Pty Limited, ABN 46 159 378 088.

In Hearts Wake has followed the Climate Active Carbon Neutral Standard for Organisations in the data collection and preparations of this report and used guiding Greenhouse Gas Protocol principles of; relevance, completeness, consistency, transparency and accuracy in the development of any new methodologies for this Small Organisation Portfolio.

Organisation description

In Hearts Wake are a band from Byron Bay, Australia, creating conscious heavy music committed to Climate Action in every way possible. Their power and purpose is to incite widespread positive action, breaking new ground in order to tackle the most pressing crises on the planet today.

We recognise our responsibility as artists to understand, quantify and reduce the emissions attributed to the creation, production and touring of our work. Becoming Carbon Neutral under the Climate Active certification is an important step forward for our band and the music industry.

As much as we enjoy playing music on the road, we also share a deep love for the natural world and realise the vital balance it brings us off the road. Understanding it's great importance is a reflection of our vision, values, and purpose to protect it. As artists we recognise that the future of our band is totally reliant on the health of our planet.

Greenhouse gas emissions considered include carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulphur hexafluoride (SF₆) and nitrogen trifluoride (NF₃).

We recognise our responsibility as artists to understand, quantify and reduce the emissions attributed to the creation, production and touring of our work. Becoming Carbon Neutral under the Climate Active certification is an important step forward for our band and the music industry.

2. EMISSION BOUNDARY

Diagram of the certification boundary

In Hearts Wake are considered a small organization certification, which is based on the standard Climate Active small organization emissions boundary with the inclusion of additional emissions fields which attribute to no more than 5% of the total annual footprint.

Non-quantified sources

- Water has been non – quantified because the information is difficult to gather relative to the estimated size of the emissions.
- ICT Equipment and Services have been non – quantified because it is restricted to a very small number of laptop computers, phones and small copier / printer, and is therefore immaterial, and can be considered small in relation to stationary energy, fuel, and electricity.

Excluded sources (outside of certification boundary)

This organization makes no use of the following item categories Refrigerants, Paper, Carbon Neutral Products and Services, for this reason these emissions sources have been excluded from the In Hearts Wake boundary as they were determined immaterial and therefore not relevant.

The following guiding questions guided this exclusion process.

1. Is the emission source deemed one of high-risk to In Hearts Wake?

Emissions sources are deemed to be high risk if there is a high perceived risk to In Hearts Wake reputation because of the emissions source (for example, highly visible impact sources such as marketing materials). Criteria were based on In Hearts Wake materiality assessments and will continue to be revisited each year.

2. Is the emission source of value to the event stakeholders?

High value emissions sources are those that may align with values of stakeholders, for example reducing waste from events may be particularly important to some even though the associated emissions are relatively small. The assessment of each emissions source against this criterion was based on the judgement of the band management team and Climate Active Registered Consultant working on this project.

3. Is the combined impact of the emission source significant in quantitative size?

The relative contribution of each emissions source to the footprint of the band overall was based on the inventories of each previously measured event. The significance of each emissions source in terms of size was based on this assessment.

“We recognise our responsibility as artists to understand, quantify and reduce the emissions attributed to the creation, production and touring of our work. Becoming Carbon Neutral under the Climate Active certification is an important step forward for our band and the music industry.”

3. EMISSIONS SUMMARY

Emissions Reduction Strategy

Several emissions reduction activities will be undertaken during the subsequent, and future reporting periods by In Hearts Wake.

Where possible the individually quantified emissions will annually be calculated and reported upon through Public Disclosure Statements.

In Hearts Wake will aim to widely promote the carbon neutral certification in 2021 with the aim of engaging partners, patrons, suppliers, and venue owners/operators.

Planned emissions reduction activities fall into the following categories:

- Energy efficiency and renewable energy
- Waste reduction and recycling
- Low emissions transport
- Sustainable supply chain
- Measurement, marketing, and engagement.

Key strategies include:

- Encouraging partner venues to consider renewable energy purchasing.
- Reducing Air Travel where possible.
- Reducing waste by mandating the use of compostable or recyclable materials by food trucks, implementing ways to educate attendees to use the correct bins and to minimise their waste by bringing their own refillable water bottles.
- Facilitating lower emissions forms of travel for artists, attendees and staff including public transport, city bikes, more bike parking and utilising fuel-efficient vehicles where possible for hired vehicles and freight services.
- Seeking ways to reduce printed materials, including ticketing and day bills, by creating electronic programs, re-using day bills and engaging with suppliers.

- Seeking to re-purpose old sets and props wherever possible through post-event sales and donation, rather than sending to landfill
- Aiming to re-use as many items as possible including t-shirts, fence wrap, signage etc. to avoid sending to landfill.
- Removing dates from as many generic branded items as possible, to facilitate re-use in future years.
- Where possible, carbon neutral products or services will be sourced.

Emissions summary (inventory)

Emission source category	tonnes CO ₂ -e
<i>Business travel (air)</i>	1.1
<i>Business travel (taxi and ride share)</i>	0.009
<i>Business travel (accommodation)</i>	0.19
<i>Business travel (meals)</i>	1.1
<i>Land and Sea Travel (hired vehicles)</i>	1.87
<i>Petrol, Diesel and gas used in company cars</i>	1.97
<i>Postage, courier, and Freight</i>	0.43
<i>Waste</i>	1.44
<i>Electricity (Working From Home)</i>	0.78
<i>Venue Hire including Cleaning Services</i>	9.5
<i>Professional Services applications</i>	0.66
<i>Consumables/ purchases/ equipment</i>	0.2
Total Net Emissions	18.99

Uplift factors

Table 3

Reason for uplift factor	tonnes CO ₂ -e
Water - difficult to gather relative to the estimated size of the emissions. 5% uplift has been applied.	0.28
ICT Services and Equipment - small in relation to stationary energy, fuel, and	0.28

electricity. 5% uplift has been applied.

<i>Total footprint to offset (uplift factors + net emissions)</i>	19.018
---	--------

Carbon neutral products

In Hearts Wake have not purchased any Climate Active carbon neutral products during this reporting period.

Electricity summary

No tenancy or base building electricity was consumed by In Hearts Wake in FY2020-21 as there was no designated office space. The emissions associated with electricity consumption have already been factored into the working from home emissions.

4. CARBON OFFSETS

Offset's strategy

Offset purchasing strategy: In arrears	
1. Total offsets previously forward purchased and banked for this report	0
2. Total emissions liability to offset for this report	20
3. Net offset balance for this reporting period	20
4. Total offsets to be forward purchased to offset the next reporting period	0
5. Total offsets required for this report	20

Offset's summary

Proof of cancellation of offset units

Full offset documentation was included in the application certification process. All offset units have been purchased and cancelled for the 2020 - 2021 Financial calendar year based on the 2020 - 2021 Carbon accounts.

Offsets cancelled for Climate Active Carbon Neutral Certification											
Project description	Type of offset units	Registry	Date retired	Serial number (and hyperlink to registry transaction record)	Vintage	Quantity	Eligible Quantity (TCO2-e)	Quantity used for previous reporting periods	Quantity banked for future reporting periods	Quantity used for this reporting period claim	Percentage of total (%)

APPENDIX 1

Excluded emissions

To be deemed relevant an emission must meet two of the five relevance criteria. Excluded emissions are detailed below against each of the five criteria.

Table 9

Relevance test					
Excluded emission sources	The emissions from a particular source are likely to be large relative to the organisation's electricity, stationary energy and fuel emissions	The emissions from a particular source contribute to the organisation's greenhouse gas risk exposure.	Key stakeholders deem the emissions from a particular source are relevant.	The responsible entity has the potential to influence the reduction of emissions from a particular source.	The emissions are from outsourced activities previously undertaken within the organisation's boundary, or from outsourced activities typically undertaken within the boundary for comparable organisations.
