Appendix D: Outside emission boundary	22

2. CARBON NEUTRAL INFORMATION

Description of certification

Simply Energy is an energy retailer serving residential and business customers in Victoria, South Australia, New South Wales, Western Australia, and Queensland.

In January 2021, Simply Energy launched a certified carbon neutral gas product, for all new residential and small business customers, and on an opt-in basis for business customers. This product has continued to be sold throughout FY2022.

The product differs from Simply Energy's gas products sold prior to 2021 as the associated greenhouse gas emissions from the product is being offset by the purchase of carbon credits.

"Simply Energy is committed to safeguarding the welfare of the environment. Climate Active certification is a testament to that commitment."

Organisation description

Simply Energy is an energy retailer, providing electricity and gas to households and businesses across Australia. We have been making energy simple and affordable for Australian households and businesses since 2005. We pride ourselves on providing smart electricity and gas solutions that help customers manage their energy usage.

Simply Energy is proudly backed by ENGIE – one of the largest independent power producers in the world and a global leader in the transition to a carbon-neutral world. ENGIE makes significant investments in renewable energy generation and energy efficiency worldwide and is committed to changing the face of energy in Australia, developing, and providing responsible, sustainable energy solutions.

This certification relates to Simply Energy (IPower Pty Ltd (ACN 111 267 228) and IPower 2 Pty Ltd (ABN 24 070 374 293), trading as Simply Energy (ABN 67 269 241 237).

Product description

The total consumption of customers supplied with energy covered by the gas product has been determined, and the associated emissions calculated to be ~30,019 t CO₂-e in year 1 (H2 FY2021) and ~123,500 tCO₂-e in year 2 (FY2022). This number has increased, as more small customers are acquired, and large businesses opt-in to the option of being supplied this product.

The functional unit for our gas product is 1 gigajoule (GJ) of natural gas sold per year.

For this second retrospective submission, the total gas sold to Simply Energy customers is based on the following period: 1 July 2021 – 30 June 2022. The supply chain, is as per the illustrated emission boundary diagram in Section 3.

3. EMISSIONS BOUNDARY

Inside the emissions boundary

All emission sources listed in the emissions boundary are part of the carbon neutral claim.

Quantified emissions have been assessed as 'attributable processes' that become the product, make the product, and carry the product through its life cycle. These have been quantified in the carbon inventory.

Non-quantified emissions have been assessed as attributable and are captured within the emissions boundary but are not measured (quantified) in the carbon inventory.

Outside the emissions boundary

Non-attributable emissions have been assessed as not attributable to a product or service. They can be **optionally included** in the emissions boundary and therefore have been offset, or they can be listed as outside of the emissions boundary (and are therefore not part of the carbon neutral claim). Further detail is available at Appendix D.

Inside emissions boundary

Quantified

Gas consumed by customers

Electricity generated in operations

Waste generated in operations

Employee commuting

Product process diagram

Data management plan for non-quantified sources

ENGIE wants to set the pace for the decarbonisation of the energy industry and announced in 2021 its ambition to become Net Zero by 2045^[1] covering all emissions across the value chain. With this, both ENGIE and Simply Energy takes our approach to data management seriously. We have a regulatory obligation to keep various types of records for a minimum of 2 years and extending out to 10 years. Records are kept in compliance with the Privacy act and [our privacy policy](#).

In CY 2021, Simply Energy trialled an internal reporting tool to capture and track relevant energy and carbon data. These trials enabled availability of quality datasets for the first half year of FY 2022 Climate Active reporting. These results have prompted Simply Energy and ENGIE to actively pursue the procurement of an external reporting tool to facilitate the tracking and reporting of energy and carbon data for NGER and Climate Active submissions. Furthermore, the procurement of an external tool will minimise the data gaps and promote continuous and ongoing reporting.

4. EMISSIONS REDUCTIONS

Emissions reduction strategy

Globally ENGIE has embarked upon a major transformational journey, repositioning and refocusing its actions and strategic priorities around long-term sustainable growth aligned with its corporate purpose.

ENGIE has set a goal of reaching net-zero carbon throughout its value chain (Scope 1, 2, and 3) by 2045, following a well-below 2°C trajectory certified by the Science Based Target Initiative (SBTi) in February 2023. In this way, the Group is reducing its direct and indirect greenhouse gas emissions by at least 90% compared with 2017. At the same time, it plans to work on the development of carbon sinks to neutralise its residual emissions over the long-term and thus contribute at the right level to achieve carbon neutrality. The Group is also committed to supporting its customers in the reduction of their GHG emissions to accelerate its own value chain. Please find additional details on our climate strategy in our *2023 Integrated Report*²

Aligned with the Group level targets, ENGIE is committed to changing the face of energy in Australia, developing, and providing responsible, sustainable energy solutions. As a part of this commitment and the Group's aspirations, Simply Energy (backed by ENGIE Group) and ENGIE ANZ (Australia and New Zealand's business unit) are currently undertaking a decarbonisation roadmap study to identify specific initiatives to reduce Simply Energy's emissions footprint. These measures include a range of policy initiatives and targets to reduce the carbon intensity of the Group's energy production, investing in renewable energy generation, and providing advice and support to customers to improve the energy efficiency of their properties.

These measures include a range of policy initiatives and targets to reduce the carbon intensity of the Group's energy production, investing in renewable energy generation, and providing advice and support to customers to install renewable energy technology and improve the energy efficiency of their properties.

Policy

As part of the ENGIE Group, Simply Energy is committed to safeguarding the welfare of the environment. Decarbonisation of our generation infrastructure is a major goal for ENGIE around the world. In Australia and the Asia Pacific region, ENGIE has closed or divested all coal-fired power generation facilities. We are proud to be setting the standard in Australia in lower carbon energy generation, renewables, energy efficiency and technology-based solutions.

Some of our other initiatives include:

- Adoption in 2014 of an ambitious objective to reduce the carbon intensity of our electricity production by 20% by 2020.
- Promotion of the most efficient and virtuous technologies, such as energy efficiency, condensing boilers, heat pumps and renewable energy.
- Involvement in the construction of the international framework for the fight against climate change

² 2023 Integrated Report (P65): [ENGIE_RI23_VA_VDEF.pdf](#)

through joining and supporting initiatives such as the World Bank's Prototype Carbon Fund, Caring for Climate (United Nations Global Compact) or the Taskforce on Climate-related Financial Disclosures (TCFD).

- Support for initiatives to develop carbon pricing mechanisms (the Carbon Pricing Leadership Coalition, WEF Climate Leaders, Strengthening the ETS Price Signal, Quinet Commission in France, etc.) and adoption in 2015 of an internal carbon price that is facilitating the global phasing-out of coal activities.
- Improved reporting quality and transparency.
- Continued long-standing climate dialogue with NGOs and more recent dialogue with investors.

Renewable Energy

In the first half of 2022, ENGIE's capital expenditure on renewable energy was €1.3 billion ^[3]. During this time, ENGIE has further increased its renewable pipeline by commissioning 2.2 GW of capacity. As of June 2022, ENGIE has more than 36 GW renewable capacity and is on track to meet its 50 GW renewable capacity by 2025.

Supporting customers

Simply Energy has 730,000 electricity and gas customer accounts across Australia. We provide energy efficiency and renewable energy advice for our customers⁴. We also provide information about storing energy in a home battery system.

Energy efficiency

Simply Energy provides a range of tools and advice to assist customers in managing their energy consumption and cost, encouraging the efficient use of energy, and minimising their carbon footprint. These tools are always evolving as we strive to better serve our customers' needs. Energy consumption and cost is tracked, and customers are informed if there is anomalous usage which deviates from historic patterns or set limits. This service is provided in a range of ways, taking customers through a journey to identify areas for improvement:

On bill	Consumption and emissions are tracked over the last 12 months to assist customers identify whether consumption patterns differ from previous years and compare usage levels with similar size households.
Via email and SMS	We provide regular emails to customers giving weekly updates on electricity use and mid-bill cycle updates on gas usage. These provide informative insights and related energy efficiency tips to ensure customers are monitoring their usage levels and help them change their usage behaviour if required. Solar alerts are provided to PV customer to help them get the best out of their solar

³[ENGIE H1 2022 Results](#)

	<p>investments. When it is identified that solar PV exports have stopped or unexpectedly reduced, customers are alerted. Information is also provided on solar export levels compared with others with similar systems.</p> <p>Where more detailed energy usage data is available, we provide it to customers on request.</p>
Online	We maintain categorised hints and tips for managing energy consumption.
App	An app is provided for customers to interact efficiently with Simply Energy and to gain access to more detailed energy usage information.

Virtual power plant

Simply Energy offers a Simply extra VPP Offer (Virtual Power Plant) whereby we sell and install batteries through specified installers for Victoria, NSW, and South Australian customers^[4], and provide a range of storage management services. This product is an example of the type of investments Simply Energy is making onto the form of future energy offerings.

Emissions reduction actions

Since their last Climate Active submission, Simply Energy has undertaken both internal and external initiatives to reduce its overall carbon footprint. These initiatives include:

External activities:

- Rollout of appliance disaggregation to all smart metered customers via a weekly Tracker email
- Launched enhanced solar feed in offers to encourage export of renewable energy, and service consumers with lower emissions profile
- Continued growth of VPP offering post trial

Internal activities:

- Office relocation for Simply and ENGIE resulting in smaller footprint and reduced emissions.

5.EMISSIONS SUMMARY

Emissions over time

Emissions since base year		Total tCO ₂ -e	Emissions intensity of the functional unit
Base year/Year 1:	2020–21	30,019	0.057
Year 2:	2021–22	123,500	0.057

Significant changes in emissions

There is a significant increase in Year 2 CO₂ consumption compared to Year 1 due the carbon neutral product being available for the full reporting year (previous year only 6 months) and the growth in customers purchasing the product.

Emission source name	Current year (tCO ₂ -e and/ or activity data)	Previous year (tCO ₂ -e and/ or activity data)	Detailed reason for change
Carbon neutral products and services	123,500	30,019	Growth of customers and longer reporting period

Use of Climate Active carbon neutral products and services

N/A.

Product emissions summary

The gas summary is available in the Appendix B. gas emissions were calculated using a location-based approach.

Table 1

Emission category	Sum of total emissions (tCO ₂ -e)
Carbon neutral products and services	123,303
Natural gas SA	4,355
Natural gas VIC	97,784
Natural gas NSW	19,731

Functional units

Emissions intensity per functional unit	0.057
Number of functional units to be offset	2,161,964
Total emissions to be offset	123,500

6. CARBON OFFSETS

Offsets retirement approach

Forward purchasing	
1. Total eligible offsets forward purchased and retired in last year's report	34,889
2. Total emissions footprint to offset for this report	123,500
3. Total eligible offsets retired and used for this report	88,611
4. Total eligible offsets forward purchased and retired for next year's report	65,962
5. Total eligible offsets forward purchased and retired for next year's report plus any remaining banked offsets to be carried over	65,962

Co-benefits

A wide range of carbon offsets are available on the market, however, they vary in source and quality. Simply Energy ensured, through a rigorous selection process, carbon offsets comply with the Climate Active standards. An example of co-benefits is the purchase of certificates and stapled Biodiverse Reforestation Carbon Offsets associated with the Yarra Yarra Biodiversity Corridor.

Table 4

Project: Yarra Yarra Biodiversity Corridor (Western Australia)	
<p>Description: The purpose of this project is to protect and expand small patches of remaining woodland and shrubland with newly planted vegetation. The corridor sits on WA's wheatbelt north of Perth, where agriculture has devastated more than 90% of native habitat.</p> <p>The project involves 20 to 40 species to maximise biodiversity, with plans to extend the corridor to 10,000 square kilometres.</p> <p>Co-benefits</p> <ul style="list-style-type: none"> Protect native flora that previously has been subjected to agricultural clearing Help preserve habitat for fauna such as Malleefowl, Carnaby's Black-Cockatoo, and Western Spiny-tailed Skinks 	
FY2022 offsets retired: 235	

Table 5

Project: Darling River Eco Corridor #39 (White Cliffs, NSW)	
<p>Description: The purpose of this project is to implement a regeneration project on the property, reducing feral animal populations and upgrade infrastructure such as fencing and floodgates.</p> <p>As a result of regeneration efforts, rain and reduced grazing pressure, local flora has been able to regrow, including the Queensland Bluebush, which had previously not been seen in the area. The main Yancannia creek and surrounds have become a haven for birdlife.</p> <p>The project involves 6,273 hectares</p> <p>Co-benefits (SDG's)</p> <ul style="list-style-type: none"> Good jobs and economic growth Climate Action Life on land 	
FY2022 offsets retired: 1,025

Product non-attributable sources

To be deemed attributable an emission must meet two of the five relevance criteria. Non-attributable emissions are detailed below against each of the five criteria.

Emission sources tested for relevance	(1) Size	(2) Influence	(3) Risk	(4) Stakeholders	(5) Outsourcing
Non-attributable emission	<i>The emissions from a particular source are likely to be large relative to the organisation's electricity, stationary energy and fuel emissions</i>	<i>The emissions from a particular source contribute to the organisation's greenhouse gas risk exposure.</i>	<i>Key stakeholders deem the emissions from a particular source are relevant.</i>	<i>The responsible entity has the potential to influence the reduction of emissions from a particular source.</i>	<i>The emissions are from outsourced activities previously undertaken within the organisation's boundary, or from outsourced activities typically undertaken within the boundary for comparable organisations.</i>
