## 2. CERTIFICATION INFORMATION

### Description of certification

This certification is for the Australian Tourism Exchange 2025 (ATE25) being held from Sunday, 27 April to Thursday, 1 May 2025.

The event is expected to have 2,510 attendees and is being held at the Brisbane Convention and Exhibition Centre (BCEC) at the corner of Merivale and Glenelg Streets, South Bank, Brisbane QLD 4101.

The Climate Active event calculator was used to prepare this carbon inventory, which is based on the *Climate Active Carbon Neutral Standard for Events*. This is a recurring event.

### Event description

The Australian Tourism Exchange 2025 (ATE25) will be held in Brisbane/Meenjin by Tourism Australia (ABN: 996 575 487 12), the Australian Government agency responsible for attracting international visitors to Australia, in partnership with Tourism and Events Queensland.

The event is scheduled to take place at the Brisbane Convention and Exhibition Centre (BCEC) between Sunday, 27 April to Thursday, 1 May 2025.

The four-day event will bring together Australian tourism businesses with global distribution partners to conduct scheduled business appointments and participate in key networking events.

All travel to and from the event and all components of the main are included in this certification. This includes four days of seller and buyer networking and business appointments, morning and afternoon tea, lunch, a happy hour and a welcome event. Pre and post-event excursions are not included in this certification.

The Australian Tourism Exchange has been previously certified twice previously for ATE23 and ATE24. Similar attendee numbers are expected compared to previous years, but different travel patterns are expected due to changes in locations.

## 3.EMISSIONS BOUNDARY

### Inside the emissions boundary

All emission sources listed in the emissions boundary are part of the carbon neutral claim.

**Quantified emissions** have been assessed as relevant and are quantified in the carbon inventory. This may include emissions that are not identified as arising due to the operations of the event, however are **optionally included**.

**Non-quantified emissions** have been assessed as relevant and are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. All material emissions are accounted for through an uplift factor. Further detail is available at Appendix C.

### Outside the emissions boundary

**Excluded emissions** are those that have been assessed as not relevant to the event's operations and are outside of its emissions boundary or are outside of the scope of the certification. These emissions are not part of the carbon neutral claim. Further detail is available at Appendix D.

## Inside emissions boundary

### Quantified

Electricity  
Attendee travel  
Food & drink  
Accommodation  
Waste  
Event coach transfer  
Machinery and vehicles  
(Electrical equipment)  
Office equipment and  
supplies (Furniture, Printing  
and stationery)  
Products (signage)  
Professional services  
Venue natural gas  
Venue water utilities

### Non-quantified

Promotional merchandise

## Outside emission boundary

### Excluded

N/A

## Data collection

Emissions source	Data collection method	Assumptions / conservative approach taken
Attendee travel	Attendee registration data was used to estimate attendee travel, this included: <ul style="list-style-type: none"> <li>Country/City of origin;</li> <li>Flight class (e.g. economy); and</li> <li>Number of attendees</li> </ul>	Assumes attendees not yet registered will all be local attendees.
Attendee accommodation	Attendee registration data was used to estimate attendee travel, this included: <ul style="list-style-type: none"> <li>Hotel Type (e.g. 4-star);</li> <li>Number nights and rooms; and</li> <li>Attendee type (e.g. buyer, seller etc).</li> </ul>	Assumes Airbnb's are 3-star accommodation.
Food and drinks	Estimated using the catering summary provided for ATE25 event, including proportion of vegetarian to non-vegetarian meals.	Assumptions on the total number of meals served each day, taking into consideration the total number of attendees.  Based on catering menus it is assumed that 41% of meals are vegetarian, 33% are vegan and 26% are meat based.
Electricity	Estimate (KWh) provided by previous venue based on the findings from similar events held at the venue with similar number of attendees and space utilised.	Assume that the comparison event had similar attendance and electricity demand requirements. Assumes no Greenpower.
Waste	Average waste productions (tonnes/person/day) sources from waste report provided by event venue in 2024.	Assumes similar waste patterns as previous ATE event venues.
Gas	Average gas consumption (m3/person/day) estimated using ATE24 data	Assumes event activities require similar amount of gas as per previous ATE event venues.
Coach transfers	Information provided by Tourism Australia through its arrangement with service provider and scheduled bus routes, including: <ul style="list-style-type: none"> <li>Average size of the coach/bus;</li> <li>Estimated number of return journeys;</li> <li>Start and end location of the journey.</li> </ul>	Assumes scheduled bus services will be used by all scheduled attendees, and only drive the previously agreed routes.

## 4. EMISSIONS REDUCTIONS

### Emissions reduction measures

The Australian Tourism Exchange (ATE) event is a business-to-business tourism trade event which alternates location on an annual basis, and this provides a series of considerations for developing an emissions reduction strategy, including:

- The event likely to be working with new venue(s), vendors, local governments and local stakeholders each year the event is held;
- Providing an incentive to standardise basic initiatives where possible to reduce the resources required to develop all new initiatives annually; and
- The importance of developing both strong short-term and long-term partnerships to support a emissions reduction strategy.

Considering the above, key initiatives to be undertaken to reduce the footprint of ATE events moving forward include:

Event Section	Emission Source	Initiative
Venue Resource Management	• Electricity	• Engage with venue owners early to understand overarching sustainability policy and commitments of venues.
	• Waste	
	• Refrigerants	<ul style="list-style-type: none"> <li>• Develop a specific 'ATE Australia Venue Sustainability Plan' pre-event to outline: <ul style="list-style-type: none"> <li>○ How the event will align, support and improve the sustainability systems and initiatives of the venue (e.g. providing additional signage for correct use of bins in the venue).</li> <li>○ Agreed collaborations between Tourism Australia, the venue and any other key stakeholders for specific sustainability initiatives.</li> <li>○ Encourage venue management to consider purchasing 100% GreenPower for their venues, and include the following as considerations when selecting venues where possible: <ul style="list-style-type: none"> <li>▪ Purchase of 100% GreenPower;</li> </ul> </li> </ul> </li> </ul>
	• Transport (local)	
	• Water	

		<ul style="list-style-type: none"> <li>▪ Locations that have solar installed; and</li> <li>▪ Locations that have demonstrated high energy performance ratings.</li> </ul>
Hospitality	<ul style="list-style-type: none"> <li>• Food and beverages</li> </ul>	<ul style="list-style-type: none"> <li>• Aim to provide predominately plant-based (60%) menu options for attendees.</li> <li>• Mandating the use of compostable or recyclable materials where possible.</li> <li>• Develop partnerships with local organisations (e.g. Foodbank) to reduce (or eliminate) any food wastage.</li> </ul>
Promotional Merchandise	<ul style="list-style-type: none"> <li>• Promotional Material</li> <li>• Signage</li> </ul>	<ul style="list-style-type: none"> <li>• Create an 'opt in' option for buyers and sellers to select when going through ticketing to give attendees the option of receiving promotional merchandise.</li> <li>• Removing dates from as many generic branded items as possible to facilitate re-use in future years.</li> <li>• Focus on developing merchandise on local recycled or local low-carbon materials.</li> <li>• Develop a goal and strategy to support certified carbon neutral products and/or organisations.</li> </ul>
Travel	<ul style="list-style-type: none"> <li>• Travel</li> <li>• Public Transport</li> </ul>	<ul style="list-style-type: none"> <li>• Develop a 'Sustainable Travel' information kit for attendees to provide attendees with low-carbon forms of transport from both accommodation partners and event locations. This could include: <ul style="list-style-type: none"> <li>○ Information on which air travel offset schemes are encouraged to be used by attendees (e.g. those that purchase ACCU credits);</li> <li>○ Instructions on how to purchase a ticket and use specific public transport routes to and from the event;</li> <li>○ Information on any bike share or e-scooter infrastructure available; and</li> <li>○ Information on end-of-trip facilities available at the</li> </ul> </li> </ul>

---

venues.

- Where Tourism Australia (TA) facilitated the purchase of international delegates' flights for ATE, TA has recorded this information to offset flight emissions.

---

As well as the above-mentioned initiatives, ATE will continue to aim to improve its data collection process to improve the accuracy of measuring not only the carbon impact of events – but also wider resource use (e.g. waste) and the beneficial outcomes of the event (e.g. supporting local businesses).

## 5.EMISSIONS SUMMARY

### Use of Climate Active carbon neutral products, services, buildings or precincts

N/A

### Emissions summary

The electricity summary is available in Appendix B. Electricity emissions were calculated using a market-based approach.

Emission category	Scope 1 emissions (tCO <sub>2</sub> -e)	Scope 2 emissions (tCO <sub>2</sub> -e)	Scope 3 emissions (tCO <sub>2</sub> -e)	Total emissions (t CO <sub>2</sub> -e)
Accommodation and facilities	0.00	0.00	312.72	312.72
Electricity	0.00	12.81	1.58	14.39
Food	0.00	0.00	62.09	62.09
Machinery and vehicles	0.00	0.00	15.51	15.51

To whom it may concern,

**Voluntary cancellation of units in ANREU**

This letter is confirmation of the voluntary cancellation of units in the Australian National Registry of Emissions Units (ANREU) by ANREU account holder, Terra Carbon Pty Limited (account number AU-1117).

The details of the cancellation are as follows:

<b>Date of transaction</b>		26 June 2024
<b>Transaction ID</b>		AU34475
<b>Type of units</b>		KACCU
<b>Total Number of units</b>		1,075
<b>Block 1</b>	<b>Serial number range</b>	9,006,904,178 - 9,006,904,952 (775 KACCU)
	<b>ERF Project</b>	Western Australia Conservation Initiative - Site 2 - ERF123913
	<b>Vintage</b>	2023-24
<b>Block 2</b>	<b>Serial number range</b>	9,003,377,490 - 9,003,377,789 (300 KACCU)
	<b>ERF Project</b>	South Australian Conservation Alliance - Site #2 - ERF139932
	<b>Vintage</b>	2023-24
<b>Transaction comment</b>		Units retired by GreenCollar on behalf of Tourism Australia for the Climate Active event certification.

Details of all voluntary cancellations in the ANREU are published on the Clean Energy Regulator's website, [Voluntary cancellations register](#) | [Clean Energy Regulator \(cer.gov.au\)](#).

If you require additional information about the above transaction, please email [CER-RegistryContact@cer.gov.au](mailto:CER-RegistryContact@cer.gov.au)

OFFICIAL

## APPENDIX B: ELECTRICITY SUMMARY

There are two international best-practice methods for calculating electricity emissions –

the location-based method and the market-based method. Reporting electricity emissions under both methods is called dual reporting.

Dual reporting of electricity emissions is useful, as it provides different perspectives of the emissions associated with a business's electricity usage.

Location-based method:

The location-based method provides a picture of the electricity emissions of a business in the context of its location, and the emissions intensity of the electricity grid it relies on. It reflects the average emissions intensity of the electricity grid in the location (State) in which energy consumption occurs. The location-based method does not allow for any claims of renewable electricity from grid-imported electricity usage.

Market-based method:

The market-based method provides a picture of the electricity emissions of a business in the context of its renewable energy investments. It reflects the emissions intensity of different electricity products, markets and investments. It uses a residual mix factor (RMF) to allow for unique claims on the zero emissions attribute of renewables without double-counting.

For this certification, electricity emissions have been set by using the **market-based approach**.

Market Based Approach Summary			
Market Based Approach	Activity Data (kWh)	Emissions (kg CO2-e)	Renewable Percentage of total
Behind the meter consumption of electricity generated	0	0	0%
<b>Total non-grid electricity</b>	<b>0</b>	<b>0</b>	<b>0%</b>
LGC Purchased and retired (kWh) (including PPAs)	0	0	0%
GreenPower	0	0	0%
Climate Active precinct/building (voluntary renewables)	0	0	0%
Precinct/Building (LRET)	0	0	0%
Precinct/Building jurisdictional renewables (LGCS surrendered)	0	0	0%
Electricity products (voluntary renewables)	0	0	0%
Electricity products (LRET)	0	0	0%
Electricity products jurisdictional renewables (LGCs surrendered)	0	0	0%
Jurisdictional renewables (LGCs surrendered)	0	0	0%
Jurisdictional renewables (LRET) (applied to ACT grid electricity)	0	0	0%
Large Scale Renewable Energy Target (applied to grid electricity only)	3,584	0	18%
Residual Electricity	15,811	14,388	0%
<b>Total renewable electricity (grid + non grid)</b>	<b>3,584</b>	<b>0</b>	<b>18%</b>
<b>Total grid electricity</b>	<b>19,395</b>	<b>14,388</b>	<b>18%</b>
<b>Total electricity (grid + non grid)</b>	<b>19,395</b>	<b>14,388</b>	<b>18%</b>
Percentage of residual electricity consumption under operational control	100%		
<b>Residual electricity consumption under operational control</b>	<b>15,811</b>	<b>14,388</b>	
Scope 2	14,073	12,807	
Scope 3 (includes T&D emissions from consumption under operational control)	1,737	1,581	
<b>Residual electricity consumption not under operational control</b>	<b>0</b>	<b>0</b>	
Scope 3	0	0	

<b>Total renewables (grid and non-grid)</b>	<b>18.48%</b>
<b>Mandatory</b>	<b>18.48%</b>
<b>Voluntary</b>	<b>0.00%</b>
<b>Behind the meter</b>	<b>0.00%</b>
<b>Residual scope 2 emissions (t CO2-e)</b>	<b>12.81</b>
<b>Residual scope 3 emissions (t CO2-e)</b>	<b>1.58</b>
<b>Scope 2 emissions liability (adjusted for already offset carbon neutral electricity) (t CO2-e)</b>	<b>12.81</b>
<b>Scope 3 emissions liability (adjusted for already offset carbon neutral electricity) (t CO2-e)</b>	<b>1.58</b>
<b>Total emissions liability (t CO2-e)</b>	<b>14.39</b>

Figures may not sum due to rounding. Renewable percentage can be above 100%

Location Based Approach Summary						
Location Based Approach	Activity Data (kWh) total	Under operational control			Not under operational control	
Percentage of grid electricity consumption under operational control	100%	(kWh)	Scope 2 Emissions (kgCO <sub>2</sub> -e)	Scope 3 Emissions (kgCO <sub>2</sub> -e)	(kWh)	Scope 3 Emissions (kgCO <sub>2</sub> -e)

<b>Total emissions liability</b>	<b>17.07</b>

### Operations in Climate Active buildings and precincts

Operations in Climate Active buildings and precincts	Electricity consumed in Climate Active certified building/precinct (kWh)	Emissions (kg CO <sub>2</sub> -e)
N/A	0	0
Climate Active carbon neutral electricity is not renewable electricity. These electricity emissions have been offset by another Climate Active member through their building or precinct certification. This electricity consumption is also included in the market based and location based summary tables. Any electricity that has been sourced as renewable electricity by the building/precinct under the market based method is outlined as such in the market based summary table.		

### Climate Active carbon neutral electricity products

Climate Active carbon neutral product used	Electricity claimed from Climate Active electricity products (kWh)	Emissions (kg CO <sub>2</sub> -e)
N/A	0	0
Climate Active carbon neutral electricity is not renewable electricity. These electricity emissions have been offset by another Climate Active member through their electricity product certification. This electricity consumption is also included in the market based and location based summary tables. Any electricity that has been sourced as renewable electricity by the electricity product under the market based method is outlined as such in the market based summary table.		

## APPENDIX C: INSIDE EMISSIONS BOUNDARY

### Non-quantified emission sources

The following emissions sources have been assessed as relevant, are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. These emissions are accounted for through an uplift factor. They have been non-quantified due to one of the following reasons:

1. **Immaterial** <1% for individual items and no more than 5% collectively
2. **Cost effective** Quantification is not cost effective relative to the size of the emission but uplift applied.

Relevant non-quantified emission sources	Justification reason
Promotional Merchandise	Immaterial

## APPENDIX D: OUTSIDE EMISSIONS BOUNDARY

### Excluded emission sources

Those which only meet one condition of the relevance test can be excluded from the certification boundary.

Emissions tested for relevance are detailed below against each of the following criteria:

1. **Size** - The emissions from a particular source are likely to be large relative to the event's electricity.
2. **Influence** - The responsible entity has the potential to influence the reduction of emissions from a particular source.
3. **Risk** - The emissions from a particular source contribute to the event's greenhouse gas risk exposure.
4. **Stakeholders** - The emissions from a particular source are deemed relevant by key stakeholders.
5. **Outsourcing** - The emissions are from outsourced activities that were previously undertaken within the event's boundary or from outsourced activities that are typically undertaken within the boundary for comparable events.

Emission sources tested for relevance	Size	Influence	Risk	Stakeholders	Outsourcing	Justification
N/A	Y / N	Y / N	Y / N	Y / N	Y / N	Size: N/A Influence: N/A Risk: N/A Stakeholders: N/A Outsourcing: N/A
