2.CERTIFICATION INFORMATION

Description of product certification

This product certification is for the opt in carbon offset program offered by Kleenheat, which allows residential gas customers to contribute to Kleenheat acquiring offset units to help compensate for emissions resulting from a household's natural gas use.

- Functional unit: equals 1 gigajoule (GJ) of opt in natural gas consumed, with emissions expressed as tonnes of carbon dioxide emissions (CO₂-e) per GJ.
- Offered as: opt-in product.
- Life cycle: is considered as cradle-to-grave, assuming combustion of natural gas by the end user.

The responsible entity for this product certification is Wesfarmers Kleenheat Gas Pty Ltd, ABN 40 008 679 543 (Kleenheat).

This Public Disclosure Statement includes information for FY2025/26 reporting period. (Period 01/07/2025 to 22/01/2026)

Description of business

Kleenheat is part of Wesfarmers Chemicals, Energy and Fertilisers (WesCEF), a division of Wesfarmers Limited, which is registered at Level 14, Brookfield Place Tower 2, 123 St Georges Terrace, PERTH, WA 6000.

Kleenheat extracts liquified petroleum gas (LPG) from natural gas and manufacturers liquefied natural gas (LNG) at the Kleenheat Production Facility in Kwinana, Western Australia.

In addition, Kleenheat operates as a retailer of natural gas, serving residential and commercial markets in Western Australia. Kleenheat offers residential natural gas customers an opt-in product to offset greenhouse gas emissions associated with their use of natural gas purchased from Kleenheat.

Kleenheat commenced offering this product on 9 August 2022.

3.EMISSIONS BOUNDARY

Inside the emissions boundary

All emission sources listed in the emissions boundary are included in assessing emissions resulting from a household's use of natural gas.

Quantified emissions have been assessed as 'attributable processes' of a product or service. These attributable processes are services, materials and energy flows that become the product or service, make the product or service and carry the product or service through its life cycle. These attributable emissions have been quantified in the carbon inventory.

Non-quantified emissions have been assessed as attributable and are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. All material emissions are accounted for through an uplift factor. Further detail is available at Appendix C.

Attributable emissions sources can be **excluded** from the carbon inventory but still considered as part of the emissions boundary if they meet **all three of the below criteria**. An uplift factor may not necessarily be applied.

1. A data gap exists because primary or secondary data cannot be collected (**no actual data**).
2. Extrapolated and proxy data cannot be determined to fill the data gap (**no projected data**).
3. An estimation determines the emissions from the process to be **immaterial**.

Outside the emissions boundary

Non-attributable emissions have been assessed as not attributable to a product or service. They can be listed as outside of the emissions boundary (and are therefore not part of the carbon neutral claim). Further detail is available at Appendix D.

Inside emissions boundary

4.EMISSIONS REDUCTIONS

Emissions reduction strategy

Kleenheat's natural gas retailing business is part of WesCEF, which also includes CSBP Chemicals and Fertilisers, Australian Vinyls, and ModWood. Additionally, WesCEF holds a 50 per cent interest in Queensland Nitrates and the Covalent lithium mine and refinery and a 75 per cent interest in Australian Gold Reagents.

WesCEF set a target of achieving net zero Scope 1 and Scope 2 emissions by 2050, outlined in its net zero roadmap¹. The roadmap included an interim target to reduce operational emissions by 30 per cent, relative to a 2020 baseline, by 2030. In setting its 2050 roadmap, WesCEF assumed that low-emissions technologies and emerging solutions, such as carbon capture, utilisation and storage, and low emissions ammonia technologies, would advance and become commercially viable and operate at scale well before 2050. WesCEF also assumed that government policy would remain supportive of climate action and technologies required to decarbonise. These assumptions and targets are reviewed annually.

For the period 1 July 2025 to 31 December 2025, WesCEF's Scope 1 and Scope 2 (market-based) emissions decreased by 9.0 per cent (relative to the prior corresponding period), supported in part by additional abatement technology installed in its newest nitric acid plant.

Kleenheat has not set specific emission reduction targets for its retailing activities. At this stage, setting targets with certainty and accuracy is complex due to the nature of the emissions and the relatively small contribution they make to Kleenheat's overall emissions. Nevertheless, Kleenheat continued to implement the emission reduction actions identified in its Product Disclosure Statement for 2023/24.

More than 99 per cent of emissions associated with natural gas products occur in the extraction, production, transportation, and combustion of natural gas, which are outside the direct control of Kleenheat and, therefore form part of its scope 3 emissions.

¹ Further information on WesCEF's net zero roadmap is available at [Wescef.com.au/Wescefs-roadmap-to-net-zero/](https://wescef.com.au/Wescefs-roadmap-to-net-zero/)

Emissions reduction actions

Emissions reduction activities to date:

- Launched a product offer for Kleenheat customers under the Kleenheat Spark platform on 1 December 2025. The offer provides tailored packages, upfront cost estimates, and guidance for Perth households considering solar and battery installations. The offer enables customers to explore and adopt options to generate and use renewable electricity from rooftop solar systems in their homes.
- Continued to engage with key gas suppliers to better understand their emissions profiles. The majority of Kleenheat's suppliers have public net zero Scope 1 and Scope 2 targets. While obtaining detailed emissions data remains challenging, Kleenheat continues to collaborate with suppliers to enhance transparency across its supply chain.
- While we presently do not have emissions data, we anticipate that the following will contribute to a reduction in Kleenheat's scope 1 and 2 emissions: Completed an office relocation from Murdoch to the Perth CBD, with the fit out finished in late November 2025. Kleenheat's natural gas retail staff moved into a new office at 11 Mounts Bay Road in early December 2025. The new premises offer modern end-of-trip amenities and convenient access to public transport, supporting Kleenheat's objective to encourage sustainable commuting options for its team members. All fleet vehicles previously used by the natural gas retailing business have been sold.

5.EMISSIONS SUMMARY

Emissions over time

Emissions since base year			
		Total tCO ₂ -e	Emissions intensity of the functional unit
Base year/Year 1:	2020-21	282,577 tCO ₂ -e	0.06 tCO ₂ -e/GJ
Year 2:	2022-23	317,584 tCO ₂ -e	0.06 tCO ₂ -e/GJ
Year 3:	2023-24	278,127 tCO ₂ -e	0.06 tCO ₂ -e/GJ
Year 4:	2024-25	278,824 tCO ₂ -e	0.06 tCO ₂ -e/GJ
Year 5:	2025-26 (to 22 Jan 2026)	188,584 tCO ₂ -e	0.06 tCO ₂ -e/GJ

Significant changes in emissions

Significant changes in emissions			
Attributable process	Previous year emissions (t CO ₂ -e)	Current year emissions (t CO ₂ -e)	Reason for change
Natural Gas WA	276,918.61	187,676.13	Reporting period to 22 January 2026 only

Use of Climate Active carbon neutral products, services, buildings or precincts

Certified brand name	Product/Service/Building/Precinct used
N/A	

Emissions summary

Life cycle stage / Attributable process / Emission source	tCO ₂ -e
Extraction, production, and transportation of natural gas and combustion by end user	187,676
Kleenheat retail activities (relating to the sale of residential natural gas)	907
Attributable emissions (tCO₂-e) <i>(including 1,893 tCO₂-e of offset emissions from opt-in customers)</i>	188,584

Emissions associated with natural gas are calculated using an NGA-based emission factor that represents a combined lifecycle intensity, including upstream and downstream components. Due to the nature of this factor, emissions are not disaggregated by lifecycle stage.

Product offset liability	
Emissions intensity per functional unit	0.06 tCO ₂ -e/ Gigajoules (GJs)
Emissions intensity per functional unit including uplift factors	N/A
Number of functional units covered by the certification	33,850
Total emissions (tCO₂-e) to be offset	1,893

6.CARBON OFFSETS

Eligible offsets retirement summary

Offsets retired for Climate Active certification

Type of offset unit	Quantity used for this reporting period	Percentage of total units used
Australian Carbon Credit Units (ACCUUs)	1,893	100%

Project name	Type of offset unit	Registry	Date retired	Serial number	Vintage	Total quantity retired	Quantity used in previous reporting periods	Quantity banked for future reporting periods	Quantity used for this reporting period	Percentage of total used this reporting period
Carbon Conscious Carbon Capture Project 1	ACCU	ANREU	16/08/2024	9,006,717,689 – 9,006,717,888	2024	200	158	0	42	100%
Carbon Conscious Carbon Capture Project 1	ACCU	ANREU	26/03/2026	9,006,706,189 – 9,006,707,489	2023-24	1,301	0	0	1,301	100%
Carbon Conscious Carbon Capture Project 2	ACCU	ANREU	26/03/2026	8,357,006,635 – 8,357,006,731	2022-23	97	0	0	97	100%
Carbon Conscious Carbon Capture Project 2	ACCU	ANREU	26/03/2026	8,357,004,898 – 8,357,005,997	2022-23	1,100	0	647	453	41%

Co-benefits

This project establishes permanent plantings of mallee eucalypt tree species on land that was predominantly used for agricultural purposes for at least five years prior to project commencement.² The 5,700ha of reforestation is contained on 14 properties within the Central and Northern Agricultural Regions of Western Australia; from 2009 to 2010, more than 6,000,000 native species mallee trees were planted on land previously cleared for dryland cropping and grazing. Registration as a Carbon Farming Initiative Project included a commitment to maintain the project forest for a minimum 100 years.

The project areas are in regions recognised as significantly over-cleared, and the reforestation is providing protective habitat for native flora and fauna, reducing wind and water erosion, in some cases reducing soil salinity, and some cases providing a useful environment for sheep and honeybees.

APPENDIX B: ELECTRICITY SUMMARY

There are two international best-practice methods for calculating electricity emissions – the location-based method and the market-based method. Reporting electricity emissions under both methods is called dual reporting.

Dual reporting of electricity emissions is useful, as it provides different perspectives of the emissions associated with a business's electricity usage.

Location-based method

The location-based method provides a picture of a business's electricity emissions in the context of its location, and the emissions intensity of the electricity grid it relies on. It reflects the average emissions intensity of the electricity grid in the location (State) in which energy consumption occurs. The location-based method does not allow for any claims of renewable electricity from grid-imported electricity usage.

Market-based method

The market-based method provides a picture of a business's electricity emissions in the context of its renewable energy investments. It reflects the emissions intensity of different electricity products, markets and investments. It uses a residual mix factor (RMF) to allow for unique claims on the zero emissions attribute of renewables without double-counting.

For this certification, electricity emissions have been set by using the **market-based approach**.

Market-based approach summary			
Market-based approach	Activity Data (kWh)	Emissions (kgCO ₂ -e)	Renewable percentage of total
Behind the meter consumption of renewable electricity generated	0	0	0%
Total non-grid renewable electricity	0	0	0%
LGC Purchased and retired (kWh) (including PPAs)	0	0	0%
GreenPower	0	0	0%
Climate Active precinct/building (voluntary renewables)	0	0	0%
Precinct/Building (LRET)	0	0	0%
Precinct/Building jurisdictional renewables (LGCS surrendered)	0	0	0%
Electricity products (voluntary renewables)	0	0	0%
Electricity products (LRET)	0	0	0%
Electricity products jurisdictional renewables (LGCs surrendered)	0	0	0%
Jurisdictional renewables (LGCs surrendered)	0	0	0%
Jurisdictional renewables (LRET) (applied to ACT grid electricity)	0	0	0%
Large Scale Renewable Energy Target (applied to grid electricity only)	73,046	0	18%
Residual Electricity	328,414	302,141	0%
Total renewable electricity (grid + non grid)	73,046	0	18%
Total grid electricity	401,460	302,141	18%
Total electricity (grid + non grid)	401,460	302,141	18%
Percentage of residual electricity consumption under operational control	100%		
Residual electricity consumption under operational control	328,414	302,141	
Scope 2	289,147	266,015	
Scope 3 (includes T&D emissions from consumption under operational control)	39,267	36,126	
Residual electricity consumption not under operational control	0	0	
Scope 3	0	0	.

Total renewables (grid and non-grid)	18.20%
Mandatory	18.20%
Voluntary	0.00%
Behind the meter	0.00%
Residual scope 2 emissions (t CO₂-e)	266.02
Residual scope 3 emissions (t CO₂-e)	36.13
Scope 2 emissions liability (adjusted for already offset carbon neutral electricity) (t CO₂-e)	266.02
Scope 3 emissions liability (adjusted for already offset carbon neutral electricity) (t CO₂-e)	36.13
Total emissions liability (t CO₂-e)	302.14

Figures may not sum due to rounding. Renewable percentage can be above 100%

Location-based approach summary						
Location-based approach	Activity Data (kWh) total	Under operational control			Not under operational control	
Percentage of grid electricity consumption under operational control	100%	(kWh)	Scope 2 Emissions (kgCO ₂ -e)	Scope 3 Emissions (kgCO ₂ -e)	(kWh)	Scope 3 Emissions (kgCO ₂ -e)

Total emissions liability	228.83

Operations in Climate Active buildings and precincts

Operations in Climate Active buildings and precincts	Electricity consumed in Climate Active certified building/precinct (kWh)	Emissions (kg CO ₂ -e)
NA	0	0
<i>Climate Active carbon neutral electricity is not renewable electricity. These electricity emissions have been offset by another Climate Active member through their building or precinct certification. This electricity consumption is also included in the market based and location-based summary tables. Any electricity that has been sourced as renewable electricity by the building/precinct under the market-based method is outlined as such in the market based summary table.</i>		

Climate Active carbon neutral electricity products

Climate Active carbon neutral product used	Electricity claimed from Climate Active electricity products (kWh)	Emissions (kg CO ₂ -e)
NA	0	0
<i>Climate Active carbon neutral electricity is not renewable electricity. These electricity emissions have been offset by another Climate Active member through their electricity product certification. This electricity consumption is also included in the market based and location-based summary tables. Any electricity that has been sourced as renewable electricity by the electricity product under the market-based method is outlined as such in the market based summary table.</i>		

APPENDIX C: INSIDE EMISSIONS BOUNDARY

Non-quantified emission sources

The following emissions sources have been assessed as attributable, are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. These emissions are accounted for through an uplift factor. They have been non-quantified due to one of the following reasons:

1. **Immaterial** <1% for individual items and no more than 5% collectively
2. **Cost effective** Quantification is not cost effective relative to the size of the emission but uplift applied.
3. **Data unavailable** Data is unavailable but uplift applied. A data management plan must be put in place to provide data within 5 years.
4. **Maintenance** Initial emissions non-quantified but repairs and replacements quantified.

NA – no attributable processes have been non-quantified in this reporting period.

Data management plan for non-quantified sources

There are no non-quantified sources in the emission boundary that require a data management plan.

Excluded emission sources

Attributable emissions sources can be excluded from the carbon inventory, but still considered as part of the emissions boundary if they meet **all three of the below criteria**. An uplift factor may not necessarily be applied.

1. A data gap exists because primary or secondary data cannot be collected (**no actual data**).
2. Extrapolated and proxy data cannot be determined to fill the data gap (**no projected data**).
3. An estimation determines the emissions from the process to be **immaterial (less than 1% of emissions)**.

N/A – no attributable processes have met all three exclusion criteria.

APPENDIX D: OUTSIDE EMISSION BOUNDARY

Non-attributable emissions have been assessed as not attributable to a product or service (do not carry, make or become the product/service) and are therefore not part of the carbon neutral claim. To be deemed attributable, an emission must meet two of the five relevance criteria. Emissions which only meet one condition of the relevance test can be assessed as non-attributable and therefore are outside the carbon neutral claim. Non-attributable emissions are detailed below.

1. **Size** The emissions from a particular source are likely to be large relative to other attributable emissions.
2. **Influence** The responsible entity could influence emissions reduction from a particular source.
3. **Risk** The emissions from a particular source contribute to the responsible entity's greenhouse gas risk exposure.
4. **Stakeholders** The emissions from a particular source are deemed relevant by key stakeholders.
5. **Outsourcing** The emissions are from outsourced activities that were previously undertaken by the responsible entity or from outsourced activities that are typically undertaken within the boundary for comparable products or services.

Non-attributable emissions sources summary

Emission sources tested for relevance	Size	Influence	Risk	Stakeholders	Outsourcing	Justification
Kleenheat's corporate activities not related to the retail of natural gas.	N	N	N	N	N	Size: emissions source is not material compared to attributable emissions Influence: limited ability to materially influence the emissions from this source Risk: There are no relevant laws or regulations that apply to limit emissions specifically from this source, the source does not create supply chain risks, and it is unlikely to be of significant public interest. Stakeholders: key stakeholders are unlikely to consider this a relevant source of emissions for the product Outsourcing: We have not previously undertaken this activity within our emissions boundary and comparable products do not typically undertake this activity within their boundary.
