## 2.CERTIFICATION INFORMATION

### Description of organisation certification

This organisation certification is for the business operations of Slingsby Theatre Company Limited, ABN 30 127 432 777. The company is based in South Australia and performs across the country in venues such as the Adelaide Theatre Centre and Sydney Opera House.

This Public Disclosure Statement includes information for CY2024 reporting period.

### Organisation description

Slingsby Theatre Company Limited (ABN 30 127 432 777) produces and tours original theatre for family audiences and young people aged eight years and over. Founded in 2007, Slingsby is based on Kaurna Meyunna Yerta in Adelaide, South Australia.

The financial control approach was used to set the organisation boundary for this certification.

International flights and accommodation are included in the emissions boundary.

## 3.EMISSIONS BOUNDARY

This is a small organisation certification, which uses the standard Climate Active small organisation emissions boundary.

### Inside the emissions boundary

All emission sources listed in the emissions boundary are part of the carbon neutral claim.

**Quantified emissions** have been assessed as relevant and are quantified in the carbon inventory. This may include emissions that are not identified as arising due to the operations of the certified entity, however are **optionally included**.

**Non-quantified emissions** have been assessed as relevant and are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. All material emissions are accounted for through an uplift factor. Further detail is available at Appendix C.

### Outside the emissions boundary

**Excluded emissions** are those that have been assessed as not relevant to an organisation's operations and are outside of its emissions boundary or are outside of the scope of the certification. These emissions are not part of the carbon neutral claim. Further detail is available at Appendix D.

| Inside emissions boundary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                       | Outside emission boundary                |

## 4.EMISSIONS REDUCTIONS

### Emissions reduction strategy

Slingsby has set a target of 19% reduction over CY2024 emissions by 2030, as per the following table.

|                                     | Baseline (CY2024)<br>emissions (t CO2-e) | Target (t<br>CO2-e) | Reduction<br>(%) | Actions                                                  |
|-------------------------------------|------------------------------------------|---------------------|------------------|----------------------------------------------------------|
| Accommodation and facilities        | 2.8                                      | 2.8                 | 0%               |                                                          |
| Cleaning and chemicals              | 0.3                                      | 0.3                 | 0%               |                                                          |
| Construction materials and services | 7.1                                      | 7.1                 | 0%               |                                                          |
| Electricity                         | 7.1                                      | 0.0                 | 100%             | Use 100% Green Power / LGCs from CY2026                  |

## Uplift factors

An uplift factor is an upwards adjustment to the total carbon inventory to account for relevant emissions that cannot be reasonably quantified or estimated. This conservative accounting approach helps ensure the integrity of the carbon neutral claim.

| Reason for uplift factor                                                                                                                    | tCO <sub>2</sub> -e |
|---------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| Mandatory 5% uplift for small organisations                                                                                                 | 3.68                |
| Total of all uplift factors (tCO <sub>2</sub> -e)                                                                                           | 3.68                |
| <b>Total emissions footprint to offset (tCO<sub>2</sub>-e)</b><br><i>(total emissions from summary table + total of all uplift factors)</i> | <b>77.33</b>        |

## 6. CARBON OFFSETS

### Eligible offsets retirement summary

#### Offsets retired for Climate Active certification

| Type of offset unit                  | Quantity used for this reporting period | Percentage of total units used |
|--------------------------------------|-----------------------------------------|--------------------------------|
| Verified Emissions Reductions (VERs) | 78                                      | 100%                           |

| Project name                      | Type of offset unit | Registry      | Date retired | Serial number                                                                                                                                                                                         | Vintage | Total quantity retired | Quantity used in previous reporting periods | Quantity banked for future reporting periods | Quantity used for this reporting period | Percentage of total used this reporting period |
|-----------------------------------|---------------------|---------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|------------------------|---------------------------------------------|----------------------------------------------|-----------------------------------------|------------------------------------------------|

## 7. RENEWABLE ENERGY CERTIFICATE (REC) SUMMARY

### Renewable Energy Certificate (REC) summary

N/A

## APPENDIX A: ADDITIONAL INFORMATION

N/A

## APPENDIX B: ELECTRICITY SUMMARY

There are two international best-practice methods for calculating electricity emissions – the location-based method and the market-based method. Reporting electricity emissions under both methods is called dual reporting.

Dual reporting of electricity emissions is useful, as it provides different perspectives of the emissions associated with a business's electricity usage.

Location-based method:

The location-based method provides a picture of a business's electricity emissions in the context of its location, and the emissions intensity of the electricity grid it relies on. It reflects the average emissions intensity of the electricity grid in the location (State) in which energy consumption occurs. The location-based method does not allow for any claims of renewable electricity from grid-imported electricity usage.

Market-based method:

The market-based method provides a picture of a business's electricity emissions in the context of its renewable energy investments. It reflects the emissions intensity of different electricity products, markets and investments. It uses a residual mix factor (RMF) to allow for unique claims on the zero emissions attribute of renewables without double-counting.

For this certification, electricity emissions have been set by using the **market-based approach**.

| Market Based Approach Summary                                                                |                        |                                         |                                  |
|----------------------------------------------------------------------------------------------|------------------------|-----------------------------------------|----------------------------------|
| Market Based Approach                                                                        | Activity Data<br>(kWh) | Emissions<br>(kg<br>CO <sub>2</sub> -e) | Renewable<br>Percentage of total |
| Behind the meter consumption of electricity generated                                        | 0                      | 0                                       | 0%                               |

<sup>1</sup> This electricity is covered under Sydney Opera House's Climate Active Organisation certification.

## APPENDIX C: INSIDE EMISSIONS BOUNDARY

### Non-quantified emission sources

The following emissions sources have been assessed as relevant, are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. They have been non-quantified due to one of the following reasons:

1. **Immaterial** <1% for individual items and no more than 5% collectively
2. **Cost effective** Quantification is not cost effective relative to the size of the emission but uplift applied.
3. **Data unavailable** Data is unavailable but uplift applied. A data management plan must be put in place to provide data within 5 years.
4. **Maintenance** Initial emissions non-quantified but repairs and replacements quantified.

| Relevant non-quantified emission sources | Justification reason |
|------------------------------------------|----------------------|
| Refrigerants                             | Immaterial           |

### Data management plan for non-quantified sources

There are no non-quantified sources in the emission boundary that require a data management plan.

## APPENDIX D: OUTSIDE EMISSIONS BOUNDARY

### Excluded emission sources

There are no excluded sources in the emission boundary.
