2. CERTIFICATION INFORMATION

Description of organisation certification

This carbon inventory has been prepared for the financial year from 1 July 2024 to 30 June 2025.

The emissions boundary has been defined based on the operational control approach. The Australian business operations of Perennial Partners Limited, ABN 90 612 829 160, will be certified including all emissions within Perennial Partners' operational control.

The greenhouse gases included in the inventory include all those that are reported under the Kyoto Protocol: carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulphur hexafluoride (SF₆). All emissions are reported in tonnes of carbon dioxide equivalent (tCO₂e) and uses relative global warming potentials (GWPs).

This Public Disclosure Statement includes information for FY2024-25 reporting period.

The emissions from Perennial Partners' financed emissions and investment products are excluded from the certification boundary.

Organisation description

Established in 2000, Perennial Partners Limited (ABN 90 612 829 160) (**Perennial Partners**) is a house of specialist investment teams managing approximately A\$8.3 billion on behalf of institutional and retail clients. We partner with outstanding investment people pursuing great investment outcomes in segments where active management can add meaningful value. Our capabilities include environmental, social and governance (ESG) strategies, small and micro-cap, large companies, shares for income, fixed income, active ETFs and private markets.

Perennial Partners operated out of four locations in this reporting period:

- 55 Collins St, Melbourne VIC 3000, Australia
- 71 Eagle St, Brisbane City QLD 4000, Australia
- 3 Richardson Street, West Perth WA 6005, Australia
- 88 Phillip St, Sydney NSW 2000, Australia (office building)

The following subsidiaries are also included within this certification:

Legal entity name	ABN
Perennial Investment Management Limited	13 108 747 637
Perennial Value Management Limited	22 090 879 904
Perennial Value Small Companies Pty Limited	22 125 823 207
Perennial Private Investments Pty Limited	20 643 423 750
Perennial Better Future Pty Limited	45 647 633 065
Daintree Capital Management Pty Limited	45 610 989 912
Perennial Private Ventures GP LP Pty Limited	51 654 899 251

The following entities are excluded from this certification:

Legal entity name	ABN
Fairlight Asset Management Pty Limited	57 628 533 308

3.EMISSIONS BOUNDARY

Inside the emissions boundary

All emission sources listed in the emissions boundary are part of the carbon neutral claim.

Quantified emissions have been assessed as relevant and are quantified in the carbon inventory. This may include emissions that are not identified as arising due to the operations of the certified entity, however are **optionally included**.

Non-quantified emissions have been assessed as relevant and are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. All material emissions are accounted for through an uplift factor. Further detail is available at Appendix C.

Outside the emissions boundary

Excluded emissions are those that have been assessed as not relevant to an organisation's operations and are outside of its emissions boundary or are outside of the scope of the certification. These emissions are not part of the carbon neutral claim. Further detail is available at Appendix D.

Inside emissions boundary		Outside emission boundary
<u>Quantified</u> • Accommodation • Electricity • Base Building (Stationary energy) • Food • ICT services and equipment • Professional services • Office equipment and supplies • Postage, courier and freight • Transport (air) • Transport (land and sea) • Waste • Working from home	<u>Non-quantified</u> N/A	<u>Excluded</u> Investments

4. EMISSIONS REDUCTIONS

Emissions reduction strategy

Perennial Partners is committed to reducing its carbon footprint and believes that achieving operational carbon neutrality will help to facilitate a better future and the transition towards a low-carbon economy. We are pleased to provide transparency in our operational carbon footprint, and regularly encourage portfolio companies to measure their GHG Emissions, publish climate-related disclosures, including Scope 1, 2 and 3 greenhouse gas emissions and science-based targets aligned with the Paris Agreement.

Emissions Reduction Objective

Based on current emissions calculation methodology and stable business outcomes, Perennial Partners is committed to reducing the firm's greenhouse gas emissions and targets a 40% reduction in emissions intensity per Full Time Employee (FTE) across Scopes 1, 2 and 3 by 2030, from a 2021 base year.

The emissions intensity per FTE in 2021 was 6.72 tonnes of CO₂e and the emissions intensity per FTE in 2025 was 5.67 tonnes of CO₂e, which is a reduction of approximately 15.6% in emissions intensity per FTE.

We continue to review our targets and operations and update them as necessary. The firm's emissions reduction strategy outlined below seeks to provide a realistic and sustainable pathway towards achieving our emissions reduction goals.

Emissions Reduction Strategy

Perennial Partner's emissions reduction strategy seeks to minimise the firm's operational carbon footprint, with a focus on our larger emissions sources. Implementation of the emissions reduction strategy will be overseen by the Perennial Partners Sustainability Team, with contributions from members of the internal Sustainability Working Group.

Our emissions reduction strategies are outlined below.

1. **Base Buildings:** To reduce emissions from Base Buildings, we continue to engage with building management to encourage energy efficiency on our premises. As at October 2025, Aurora Place (88 Phillip Street) has a 5.0 Star NABERS Energy rating and 4.5 Star NABERS Water rating. Additionally, our office space uses sensors to turn off lights when there is no movement in the office. The NABERS Energy rating will be considered in the decision-making process of future leases.
2. **Waste:** To reduce emissions from Waste, we continue to engage with our building management to ensure that waste management is facilitated appropriately to end-of-life and that the building is demonstrating circular economy principles. We continue to work with building management to ensure appropriate waste disposal and recycling.
3. **Air Travel:** Perennial Partners encourages staff to avoid non-urgent business travel and supports

virtual teleconferencing to minimise avoidable carbon emissions. In FY23, the Board approved a policy requiring that carbon offsets are purchased for all corporate flights.

4. **ICT Services and Equipment:** To reduce emissions from ICT Services and Equipment, the internal Sustainability Working Group has discussed and is in the process of implementing various initiatives. This includes utilizing standby features where possible, purchasing Energy STAR-rated equipment and turning off power points.
5. **Professional Services:** To reduce emissions from Professional Services, we aim to collaborate with our suppliers to encourage them to reduce their emissions, to reduce carbon emissions within our supply chain. We continue to assess the sustainability practices of our most material suppliers via our supplier questionnaire, including their sustainability strategies and emissions reduction targets as part of our annual review and onboarding due diligence. Where suppliers are yet to set a target, we will aim to encourage them to establish sustainable emissions reduction strategies.

Emissions reduction actions

In FY25 as the business continues to grow, our FTE headcount has increased and so too has total expenses. However, we have also continued our emissions reducing initiatives:

- In FY25 our direct electricity purchased reduced from 41,000 kwh down to 32,000 kwh. Perennial maintains its energy plan for the Sydney office, adding GreenPower accreditation to the electricity plan through Energy Australia.
- We piloted a travel platform to track flights accommodation and car hire. Previously staff offset emissions at point of purchase but now we do so as part of our annual emissions measurement and offsetting process to ensure offsets purchased are credible.
- The new travel platform resulted in decreased spending on accommodation due to spending limit policies in place. Perennial also continues to support virtual meetings and conferences.
- Perennial has introduced an organic waste bin for composting and has a sharpened focus on improving recycling results. We have engaged building management on our office waste and recycling results and are implementing signage to continue to improve and educate staff on the importance of adequate waste disposal practices.
- Perennial Partners has implemented a secure printing process in our Sydney office to minimise paper waste. Perennial Partners uses 100% recycled carbon-neutral paper.
- Additionally, the annual vendor questionnaire sent to Perennial Partners' material vendors continued to include ESG & sustainability questions, to allow us to strengthen our understanding of the GHG emissions in our supply chain, our suppliers' approach to reducing their emissions footprint, and ultimately, inform our decision making when reviewing our partnerships with suppliers.

5.EMISSIONS SUMMARY

Emissions over time

Emissions since base year			
		Total tCO ₂ -e (without uplift)	Total tCO ₂ -e (with uplift)
Base Year (not certified)	2020-21	396.21	N/A
Year 1:	2021-22	251.15	N/A
Year 2:	2022-23	226.91	N/A
Year 3:	2023-24	296.48	N/A
Year 4:	2024-25	346.11	N/A

Significant changes in emissions

Significant changes in emissions			
Emission source	Previous year emissions (t CO ₂ -e)	Current year emissions (t CO ₂ -e)	Reason for change
Food & catering	30.45	44.80	Increased spend due to more subsidiaries, increase in house seminars; Perennial's 25th anniversary event; client meetings and boutique lunches.
Business services	38.38	51.82	More consulting services in FY25
Air Travel	80.67	88.77	Increase in spend due to increased FTEs in FY25

Use of Climate Active carbon neutral products, services, buildings or precincts

Certified brand name	Product/Service/Building/Precinct used
N/A	

Emissions summary

The electricity summary is available in Appendix B. Electricity emissions were calculated using a market-based approach.

Emission category	Scope 1 emissions (tCO ₂ -e)	Scope 2 emissions (tCO ₂ -e)	Scope 3 emissions (tCO ₂ -e)	Total emissions (t CO ₂ -e)
Accommodation and facilities ¹	0.00	0.00	15.42	15.42
Base Building (Stationary energy)	0.00	0.00	29.49	29.49
Electricity	0.00	0.00	0.00	0.00
Food	0.00	0.00	44.80	44.80
ICT services and equipment	0.00	0.00	13.79	13.79
Office equipment and supplies	0.00	0.00	1.90	1.90
Postage, courier and freight	0.00	0.00	1.44	1.44
Professional services	0.00	0.00	92.06	92.06
Transport (air)	0.00	0.00	88.77	88.77
Transport (land and sea)	0.00	0.00	32.54	32.54
Waste	0.00	0.00	11.86	11.86
Working from home	0.00	0.00	14.05	14.05
Total emissions (tCO₂-e)	0.00	0.00	346.11	346.11
<i>Figures may not sum to total due to rounding.</i>				

Uplift factors

N/A

¹ The emissions from co-working desk spaces have been included under the 'Accommodation and facilities' emission category. This is due to the assumption that the co-working spaces use a combination of energies like electricity, gas and dry wood to power the space. As we have not been provided a split of the energies used to make accurate attributions, we have placed the emissions under Accommodation and facilities as this category would incur a similar mix of energy.

6.CARBON OFFSETS

Eligible offsets retirement summary

Offsets retired for Climate Active certification

Type of offset unit	Quantity used for this reporting period	Percentage of total units used
Australian Carbon Credit Units (ACCUs)	347	100%

Project name	Type of offset unit	Registry	Date retired	Serial number	Vintage	Total quantity retired	Quantity used in previous reporting periods	Quantity banked for future reporting periods	Quantity used for this reporting period	Percentage of total used this reporting period
New Leaf Carbon Project	ACCU	ANREU	19/12/2025	8999234927-8999235273	2023-24	347	0	0	347	100.00%
Offset Totals:						347	0	0	347	100.00%

Co-benefits

Community Impact:

The New Leaf Carbon Project offers significant benefits to the local community by providing a sustainable economic model through carbon credit trading. This innovative financing mechanism enables continued conservation efforts while creating a market-driven solution for carbon sequestration. The project also promotes community engagement in conservation, inspiring local involvement in environmental protection and offering economic opportunities through the carbon offset market.

Biodiversity Impact:

The project protects a vast array of Tasmanian ecosystems, including ancient rainforests, sub-alpine forests, and lowland woodlands. By halting logging activities across 12,000 hectares of land, the project safeguards critical habitats for several endangered species, such as the Tasmanian devil and wedge-tailed eagle. Additionally, the project contributes to the preservation of Tasmania's unique biodiversity by ensuring long-term protection of rare and threatened species and supporting vital ecological processes.

SDGs: The project helps to address the following United Nations Sustainable Development Goals:

7. RENEWABLE ENERGY CERTIFICATE (REC) SUMMARY

Renewable Energy Certificate (REC) summary

N/A

APPENDIX A: ADDITIONAL INFORMATION

N/A

APPENDIX B: ELECTRICITY SUMMARY

There are two international best-practice methods for calculating electricity emissions – the location-based method and the market-based method. Reporting electricity emissions under both methods is called dual reporting.

Dual reporting of electricity emissions is useful, as it provides different perspectives of the emissions associated with a business's electricity usage.

Location-based method:

The location-based method provides a picture of a business's electricity emissions in the context of its location, and the emissions intensity of the electricity grid it relies on. It reflects the average emissions intensity of the electricity grid in the location (State) in which energy consumption occurs. The location-based method does not allow for any claims of renewable electricity from grid-imported electricity usage.

Market-based method:

The market-based method provides a picture of a business's electricity emissions in the context of its renewable energy investments. It reflects the emissions intensity of different electricity products, markets and investments. It uses a residual mix factor (RMF) to allow for unique claims on the zero emissions attribute of renewables without double-counting.

For this certification, electricity emissions have been set by using the market-based approach.

Market Based Approach Summary			
Market Based Approach	Activity Data (kWh)	Emissions (kg CO ₂ -e)	Renewable Percentage of total
Behind the meter consumption of renewable electricity generated	0	0	0%
Total non-grid renewable electricity	0	0	0%
LGC purchased and retired (kWh) (including PPAs)	0	0	0%
GreenPower	32,384	0	100%
Climate Active certified - Precinct/Building (voluntary renewables)	0	0	0%
Climate Active certified - Precinct/Building (LRET)	0	0	0%
Climate Active certified - Precinct/Building jurisdictional renewables (LGCs surrendered)	0	0	0%
Climate Active certified - Electricity products (voluntary renewables)	0	0	0%
Climate Active certified - Electricity products (LRET)	0	0	0%
Climate Active certified - Electricity products jurisdictional renewables (LGCs surrendered)	0	0	0%
Jurisdictional renewables (LGCs surrendered)	0	0	0%
Jurisdictional renewables (LRET) (applied to ACT grid electricity)	0	0	0%
Large Scale Renewable Energy Target (applied to grid electricity only)	5,892	0	18%
Residual electricity	-5,892	-5,421	0%
Total renewable electricity (grid + non grid)	38,276	0	118%
Total grid electricity	32,384	0	118%
Total electricity (grid + non grid)	32,384	0	118%
Percentage of residual electricity consumption under operational control	100%		
Residual electricity consumption under operational control	-5,892	-5,421	
Scope 2	-5,188	-4,773	
Scope 3 (includes T&D emissions from consumption under operational control)	-705	-648	
Residual electricity consumption not under operational control	0	0	
Scope 3	0	0	

Total renewables (grid and non-grid)	118.20%
Mandatory	18.20%
Voluntary	100.00%
Behind the meter	0.00%
Residual scope 2 emissions (t CO₂-e)	-4.77
Residual scope 3 emissions (t CO₂-e)	-0.65
Scope 2 emissions liability (adjusted for already offset carbon neutral electricity) (t CO₂-e)	0.00
Scope 3 emissions liability (adjusted for already offset carbon neutral electricity) (t CO₂-e)	0.00
Total emissions liability (t CO₂-e)	0.00

Figures may not sum to total due to rounding. Renewable percentage can be above 100%

Location-based approach summary						
Location-based approach	Activity Data (kWh) total	Under operational control			Not under operational control	
Percentage of grid electricity consumption under operational control	100%	(kWh)	Scope 2 Emissions (kgCO ₂ -e)	Scope 3 Emissions (kgCO ₂ -e)	(kWh)	Scope 3 Emissions (kgCO ₂ -e)
NSW	32,384	32,384	21,373	1,295	0	0
Grid electricity (scope 2 and 3)	32,384	32,384	21,373	1,295	0	0
NSW	0	0	0	0		
Non-grid electricity (behind the meter)	0	0	0	0		
Total electricity (grid + non grid)	32,384					

Residual scope 2 emissions (t CO ₂ -e)	21.37
Residual scope 3 emissions (t CO ₂ -e)	1.30
Scope 2 emissions liability (adjusted for already offset carbon neutral electricity) (t CO ₂ -e)	21.37
Scope 3 emissions liability (adjusted for already offset carbon neutral electricity) (t CO ₂ -e)	1.30
Total emissions liability	22.67

Operations in Climate Active buildings and precincts

Operations in Climate Active buildings and precincts	Electricity consumed in Climate Active certified building/precinct (kWh)	Emissions (kg CO ₂ -e)
N/A	0	0
Climate Active carbon neutral electricity is not renewable electricity. These electricity emissions have been offset by another Climate Active member through their building or precinct certification. This electricity consumption is also included in the market based and location-based summary tables. Any electricity that has been sourced as renewable electricity by the building/precinct under the market-based method is outlined as such in the market-based summary table.		

Climate Active carbon neutral electricity products

Climate Active carbon neutral electricity product used	Electricity claimed from Climate Active electricity products (kWh)	Emissions (kg CO ₂ -e)
N/A	0	0
Climate Active carbon neutral electricity is not renewable electricity. These electricity emissions have been offset by another Climate Active member through their electricity product certification. This electricity consumption is also included in the market based and location-based summary tables. Any electricity that has been sourced as renewable electricity by the electricity product under the market-based method is outlined as such in the market-based summary table.		

APPENDIX C: INSIDE EMISSIONS BOUNDARY

Non-quantified emission sources

The following emissions sources have been assessed as relevant, are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. They have been non-quantified due to one of the following reasons:

1. **Immaterial** <1% for individual items and no more than 5% collectively
2. **Cost effective** Quantification is not cost effective relative to the size of the emission but uplift applied.
3. **Data unavailable** Data is unavailable but uplift applied. A data management plan must be put in place to provide data within 5 years.
4. **Maintenance** Initial emissions non-quantified but repairs and replacements quantified.

Relevant non-quantified emission sources	Justification reason
N/A	N/A

Data management plan for non-quantified sources

There are no non-quantified sources in the emission boundary that require a data management plan.

APPENDIX D: OUTSIDE EMISSIONS BOUNDARY

Excluded emission sources

The below emission sources have been assessed as not relevant to this organisation's operations and are outside of its emissions boundary. These emissions are not part of the carbon neutral claim. Emission sources considered for relevance must be included within the certification boundary if they meet two of the five relevance criteria. Those which only meet one condition of the relevance test can be excluded from the certification boundary.

Emissions tested for relevance are detailed below against each of the following criteria:

1. **Size** The emissions from a particular source are likely to be large relative to the organisation's electricity, stationary energy and fuel emissions.
2. **Influence** The responsible entity has the potential to influence the reduction of emissions from a particular source.
3. **Risk** The emissions from a particular source contribute to the organisation's greenhouse gas risk exposure.
4. **Stakeholders** Key stakeholders deem the emissions from a particular source are relevant.
5. **Outsourcing** The emissions are from outsourced activities previously undertaken within the organisation's boundary, or from outsourced activities typically undertaken within the boundary for comparable organisations.

Excluded emissions sources summary

Emission sources tested for relevance						Justification
	Size	Influence	Risk	Stakeholders	Outsourcing	
Investments	Y	N	N	N	N	Size: The emissions from Perennial Partners financed emissions are likely to be large comparatively to our scope 1 and 2 emissions and other scope 3 activities. Influence: We have limited ability to reduce the emissions from this source as we do not have control of the activities that go on within the businesses we finance. Risk: There are currently no relevant laws or regulations that apply to limit emissions specifically from this source, the source does not create supply chain risks, and it is unlikely to be of significant public interest. We are aware that there is movement in the government to mandate the measurement of financed emissions and are investigating a way to calculate our financed emissions in the future. Stakeholders: It is unlikely that internal and external stakeholders will consider this a relevant source of emissions for our business. Outsourcing: We have not previously undertaken this activity within our emissions boundary and comparable organisations do not typically undertake this activity within their boundary. There is a limitation on the data available for our investee emissions.

An Australian Government Initiative
