2.CERTIFICATION INFORMATION

Description of product certification

This product certification is for sale portions of Coles Finest Certified Carbon Neutral Pork (recorded per kilogram sold) including packaging, supplied by selected producer participants in the Coles Pork Carbon Neutral Program.

- Functional unit: 1 kilogram of Coles Finest Certified Carbon Neutral Pork product (including packaging and added ingredients).
- Offered as: full coverage product
- Life cycle: cradle-to-retail shelf

The responsible entity for this product certification is Coles Supermarkets Australia Pty Ltd, ABN 45 004 189 708. A cradle-to-grave boundary was not appropriate as the post-supermarket emission sources fall outside the operational boundary and influence of the certifying organisation, and are not typically included in similar product certifications.

This Public Disclosure Statement includes information for FY2024-25 reporting period.

Description of business

At Coles, we recognise the importance of our sustainability responsibilities and believe that our ambitions can create momentum and activate change.

We have partnered with specially selected Australian farmers to bring you our Coles Finest Certified Carbon Neutral Pork. The producer has been specially selected by Coles to participate in the Program because they deliver pork that satisfies Coles' highest-quality standards, and because they produce a lower emission product than the Australian industry average¹. Pigs are procured by Coles and processed through a third-party processing plant before secondary processing, storage, distribution and retail.

Together, we are reducing the carbon footprint of this product through best practice farming and investment in emission reduction initiatives. With carbon credits, Coles will offset the remaining emissions from the production and transport of this product from farm to store.

¹ Carbon footprint for this product was lower than the national average, as reported in Copley M. A., McGahan E. J., McCormack K., Wiedemann S. G. (2024) Environmental impacts of Australian pork in 2020 and 2022 determined using lifecycle assessments. *Animal Production Science* 64, AN23352. <https://doi.org/10.1071/AN23352>.

3.EMISSIONS BOUNDARY

Inside the emissions boundary

All emission sources listed in the emissions boundary are part of the carbon neutral claim.

Quantified emissions have been assessed as 'attributable processes' of a product or service. These attributable processes are services, materials and energy flows that become the product or service, make the product or service and carry the product or service through its life cycle. These attributable emissions have been quantified in the carbon inventory.

Non-quantified emissions have been assessed as attributable and are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. All material emissions are accounted for through an uplift factor. Further detail is available at Appendix C.

Attributable emissions sources can be **excluded** from the carbon inventory but still considered as part of the emissions boundary if they meet **all three of the below criteria**. An uplift factor may not necessarily be applied.

1. A data gap exists because primary or secondary data cannot be collected (**no actual data**).
2. Extrapolated and proxy data cannot be determined to fill the data gap (**no projected data**).
3. An estimation determines the emissions from the process to be **immaterial**).

Outside the emissions boundary

Non-attributable emissions have been assessed as not attributable to a product or service. They can be listed as outside of the emissions boundary (and are therefore not part of the carbon neutral claim). Further detail is available at Appendix D.

Inside emissions boundary

Quantified

Pre-farm inputs of purchased products including feed, straw, animal health products, services and fuel and freight.

On-farm emissions associated with:

- *On-farm fuel use*
- *On-farm electricity use*
- *On-farm emissions from livestock including emissions from manure*

Post-farm emissions:

- *Road and rail freight to processing and secondary processing plants.*
- *All impacts from meat processing including energy use, chemical use, and waste treatment.*
- *Supermarket, distribution and head office centre energy use, water and refrigeration.*
- *Product packaging manufacturing.*

Non-quantified

N/A

Excluded

N/A

Outside emission boundary

Non-attributable

Consumer meat preparation, in-home storage, consumption, and end-of-life disposal of the product and packaging.

4.EMISSIONS REDUCTIONS

Emissions reduction strategy

Coles commits to an emission intensity reduction target (inclusive of scope 1, 2, 3) of 6% by 2029, from a 2022 baseline, with a reference metric of kilograms of Coles Finest Certified Carbon Neutral Pork (including packaging and added ingredients). This commitment and Coles' ability to achieve this reduction in emission intensity is contingent on the realisation of the Renewable Energy Target.

This reduction in emission intensity will occur through the following major measurable activities in the scope 3 supply chain:

- Reduced impacts from grid electricity as a result of decarbonisation of the electricity supply.
- Reductions in crude protein levels in pig feed.
- Ongoing investigations into opportunities to reduce emissions associated with upstream feed commodities, including through the procurement of low carbon grain.

This reduction in emission intensity will also be achieved by the following initiatives (reported in [Coles Sustainability Strategy](#) and [Sustainability Report](#)) within the Coles scope 1 & 2 supply chain:

- Maintain sourcing of 100% renewable energy.
- To reduce combined Scope 1 and 2 greenhouse gas emissions by more than 75% by the end of FY30 (from a FY20 baseline).
- To deliver net zero greenhouse gas emissions by 2050.

Emissions reduction actions

In FY25, the outdoor production system from which Coles procured the pigs that supply the carbon neutral pork range had a 26% lower product carbon footprint (per kilogram of liveweight) than the Australian average². The dominant greenhouse gas in outdoor pig production is nitrous oxide emissions. In FY25, a reduction in dietary crude protein resulted in an average 1.4% less nitrogen being fed to pigs. In addition, inclusion rates of imported soybean meal were (on average) 2.5% lower than in FY24.

In addition, the producer engaged with a range of stakeholders (including government and major grain handlers) to explore the potential to procure low carbon grain. Opportunities around this will continue to be explored if and when they arise.

Coles 2025 [Sustainability Report](#) reports that the Group sourced 100% renewable electricity for its operations, and achieved a 71.4% reduction in combined Scope 1 and 2 emissions from FY24.

² Copley M. A., McGahan E. J., McCormack K., Wiedemann S. G. (2024) Environmental impacts of Australian pork in 2020 and 2022 determined using lifecycle assessments. *Animal Production Science* 64, AN23352. <https://doi.org/10.1071/AN23352>.

5.EMISSIONS SUMMARY

Emissions over time

Emissions since base year			
		Total tCO ₂ -e	Percentage change in the emissions intensity of the functional unit
Projection:	2023-24	7,045	N/A
True-up/Year 1:	2023-24	3,089	-9%
Year 2:	2024-25	2,414	9%

Significant changes in emissions

Significant changes in emissions			
Attributable process	Previous year emissions (t CO ₂ -e)	Current year emissions (t CO ₂ -e)	Reason for change
Primary production (incl. LU and dLUC)	2,004	1,592	Actual emissions were lower than FY24 due to lower product sales.
Primary processing	159	138	Actual emissions were lower than FY24 due to lower product sales.
Further processing	528	416	Due to a greater proportion of total product sales being hams, the weighted average product carbon footprint at this stage was higher than in FY24. Total emissions, however, were lower than FY24 due to lower product sales.
Distribution and retail operations	397	267	Actual emissions were lower than FY24 due to lower product sales and increased adoption of renewable energy at distribution & retail.

Use of Climate Active carbon neutral products, services, buildings or precincts

Certified brand name	Product/Service/Building/Precinct used

APPENDIX B: ELECTRICITY SUMMARY

N/A

APPENDIX C: INSIDE EMISSIONS BOUNDARY

Non-quantified emission sources

The following emissions sources have been assessed as attributable, are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. These emissions are accounted for through an uplift factor. They have been non-quantified due to one of the following reasons:

1. **Immaterial** <1% for individual items and no more than 5% collectively
2. **Cost effective** Quantification is not cost effective relative to the size of the emission but uplift applied.
3. **Data unavailable** Data is unavailable but uplift applied. A data management plan must be put in place to provide data within 5 years.
4. **Maintenance** Initial emissions non-quantified but repairs and replacements quantified.

An uplift factor must be applied to account for emissions sources which are estimated to be material, but not practical to measure (such as no actual or projected data).

Relevant non-quantified emission sources	Justification reason
N/A	N/A

Data management plan for non-quantified sources

There are no non-quantified sources in the emission boundary that require a data management plan.

Excluded emission sources

Attributable emissions sources can be excluded from the carbon inventory, but still considered as part of the emissions boundary if they meet **all three of the below criteria**. An uplift factor may not necessarily be applied.

- 1. A data gap exists because primary or secondary data cannot be collected (**no actual data**).
- 2. Extrapolated and proxy data cannot be determined to fill the data gap (**no projected data**).
- 3. An estimation determines the emissions from the process to be **immaterial (less than 1% of emissions)**.

If an emissions source is determined to be material (but does not have actual or projected data), it cannot be excluded and must be considered as a non-quantified emissions source.

Please provide justification regarding each excluded emissions source:

Emissions Source	No actual data	No projected data	Immaterial	Justification
N/A	N/A	N/A	N/A	N/A

APPENDIX D: OUTSIDE EMISSION BOUNDARY

Non-attributable emissions have been assessed as not attributable to a product or service (do not carry, make or become the product/service) and are therefore not part of the carbon neutral claim. To be deemed attributable, an emission must meet two of the five relevance criteria. Emissions which only meet one condition of the relevance test can be assessed as non-attributable and therefore are outside the carbon neutral claim. Non-attributable emissions are detailed below.

1. **Size** The emissions from a particular source are likely to be large relative to other attributable emissions.
2. **Influence** The responsible entity could influence emissions reduction from a particular source.
3. **Risk** The emissions from a particular source contribute to the responsible entity's greenhouse gas risk exposure.
4. **Stakeholders** The emissions from a particular source are deemed relevant by key stakeholders.
5. **Outsourcing** The emissions are from outsourced activities that were previously undertaken by the responsible entity or from outsourced activities that are typically undertaken within the boundary for comparable products or services.

Non-attributable emissions sources summary

Emission sources tested for relevance	Size	Influence	Risk	Stakeholders	Outsourcing	Justification
Consumer meat preparation, in-home storage, consumption, and end-of-life disposal of the product and packaging.	N	N	N	N	N	Size: The emissions source is likely to be small compared to other attributable emissions. Influence: We do not have the potential to influence the emissions from this source, including by shifting to a different lower-emissions supplier for our product/service. Risk: There are no relevant laws or regulations that apply to limit emissions specifically from this source, as the source does not create supply chain risks, and it is unlikely to be of significant public interest. Stakeholders: Key stakeholders, including the public, are unlikely to consider this a relevant source of emissions for our product/service. Outsourcing: We have not previously undertaken this activity within our emissions boundary and comparable products/services do not typically undertake this activity within their boundary.
