## 2. CERTIFICATION INFORMATION

### Description of organisation certification

This organisation certification is for the business operations of Kilcoy Pastoral Company Limited ("KPC"), trading as Kilcoy Global Foods, ABN 89 009 671 112.

The base year is CY2022, while the initial certification year is CY2024. This year's true-up calculation is based on the CY2024 period and captures any discrepancies between projected and actual CY2024 emissions.

Kilcoy Pastoral's inventory has been prepared based on the "Climate Active Standard for Organisations" and the "Greenhouse Gas Protocol - A Corporate Accounting and Reporting Standard". By including all seven greenhouse gases listed under the Kyoto Protocol: Carbon dioxide (CO<sub>2</sub>), Methane (CH<sub>4</sub>), Nitrous oxide (N<sub>2</sub>O), Hydrofluorocarbons (HFCs), Perfluorocarbons (PFCs) - Sulphur hexafluoride (SF<sub>6</sub>) and Nitrogen trifluoride (NF<sub>3</sub>).

This Public Disclosure Statement includes the true-up information for CY2024.

### Organisation description

The inventory has been prepared for the period of 1st January 2024 to 31st December 2024 utilising an operational control approach. Kilcoy Pastoral Company Limited, ABN 89 009 671 112, operates a beef abattoir in Kilcoy, QLD 4515 and an administration office in Birtinya, QLD 4575. The trading name used is Kilcoy Global Foods. As can be seen in the chart below, KPC and its sister companies in Australia (with different ABNs) are part of Kilcoy Industries Australia Pty Ltd, which falls under the umbrella of "Kilcoy Global Foods Australia". It is worth mentioning that KGF is a conglomerate with other overseas units that lie outside of the emission boundaries.

Kilcoy Pastoral Company Ltd specialises in producing premium quality beef and beef co-products for the domestic and global markets.

As part of the larger Kilcoy Global Food's group is a high growth, premium food solutions provider, supplying food service providers, retailers, wholesalers and institutional clients nationally and in more than 35 countries across the globe.

The KGF business consists of 3 international divisions - Australia, North America, and China. The Australian division is made up of Red Meat Solutions, and Food Solutions. Red Meat Solutions has locations in Kilcoy, Queensland; Kyneton, Victoria; and Lance Creek, Victoria, processing premium grain and grass-fed beef and lamb.

Kilcoy Global Foods as a group are committed to supporting the community at large and developing robust partnerships to ensure we are building a sustainable and industry-leading business. Our values are integrity, curiosity, collaboration, provenance and passion. We are committed to business practices that have a positive social effect on society, and our social impact goals are "noise reduction program", "odour reduction program", "local sourcing & traceability program", "conduct ethical business" and "Customer value chain creation".

We are proud of the environmental sustainability transformation that is underway and is moving us closer to the goal of Carbon Neutral Organisation. Our sustainability goals are:

- Shift towards renewable electricity generation
- 53 Nationalities (Community, Indigenous & Refugee Support)

The following subsidiaries are also included within this certification:

| Legal entity name | ABN | ACN |
|-------------------|-----|-----|
| N/A               |     |     |

The following entities are excluded from this certification:

| Legal entity name                | ABN            | ACN         |
|----------------------------------|----------------|-------------|
| Kyneton Food Solutions Pty Ltd   | 58 650 391 530 | 125 925 308 |
| Kilcoy Cuisine Solutions Pty Ltd | 17 655 738 695 | 125 925 308 |
| Tabro Meat Pty Ltd               | 50 656 063 562 | 125 925 308 |

## 3.EMISSIONS BOUNDARY

### Inside the emissions boundary

All emission sources listed in the emissions boundary are part of the carbon neutral claim.

**Quantified emissions** have been assessed as relevant and are quantified in the carbon inventory. This may include emissions that are not identified as arising due to the operations of the certified entity, however are **optionally included**.

**Non-quantified emissions** have been assessed as relevant and are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. All material emissions are accounted for through an uplift factor. Further detail is available at Appendix C.

### Outside the emissions boundary

**Excluded emissions** are those that have been assessed as not relevant to an organisation's operations and are outside of its emissions boundary or are outside of the scope of the certification. These emissions are not part of the carbon neutral claim. Further detail is available at Appendix D.

Emissions boundary for CY2024 (true-up)

| Inside emissions boundary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                | Outside emission boundary                                                                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quantified                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Non-quantified | Excluded                                                                                                                                                                                                                |

## 4. EMISSIONS REDUCTIONS

### Emissions reduction strategy

At Kilcoy Pastoral Company Pty Limited trading as Kilcoy Global Foods (KGF), our business is intrinsically linked with nature and agriculture. Climate change is one of the most significant issues that will impact the long-term prosperity of the industry and way of life. It impacts natural cycles of water, soils, biodiversity and ecosystems that play a vital role in the production of our food.

Environmental sustainability is a cornerstone of all our processes, systems and business activities. We are continually looking for ways to reduce the impacts of our facilities, products and operations on the environment. Through water, electricity, land management, waste reduction, animal welfare and technology initiatives we're leading the industry in environmental practices.

As a responsible corporate citizen, we recognize the urgent need to take decisive action to reduce our organization's carbon footprint and contribute to a sustainable future. To this end, we propose an emissions reduction strategy that outlines specific actions to shift away from fossil fuels, reduce energy consumption, limit waste to landfill, and transition to carbon-neutral business travel.

Kilcoy Pastoral Company Pty Limited (KPC) commits to a reduction target of 50% by 2026 for Scope 1, 30% by 2027 for Scope 2 and Scope 3 emissions by 30% by 2030 emission sources from a 2022 baseline.

Scope 1 emissions will be reduced by:

- Mid 2024 we began the installation of a new biomass boiler to replace our existing coal fired boiler. This will reduce our carbon emissions from Stationary Energy (solid fuels) by up to 50% in 2025 from our 2022 baseline.
- Further reductions benefit from the above major step will be fully realised in 2025 when our carbon emissions from Stationary Energy (solid fuels) by up to 90% in 2025 from our 2022 baseline.

Scope 2 emissions will be reduced by:

- We implemented in 2022 a major wastewater to energy project in which we will be generating up to 50% of the electricity required from biogas and produce hot water as a part of the process. This reduces our demand for grid-based electricity.
- We are exploring alternative options to further reduce grid-based electricity from Solar PPAs with Green Power in 2024.

Scope 3 emissions will be reduced by:

- We will reach a zero waste to landfill status by end 2024, currently we are recycling/reusing above 95% of the waste we produce and are working hard with our supply chain partners to ensure we reach our goal of zero waste to landfill for the remainder of our waste.
- Reduction in business travel with more video conferencing facilities to be implemented and the use of more Climate Active Carbon Neutral Products within the organisation will reduce emissions by 30% by 2030, relative to our 2022 numbers.

For further details on KGF's emission reduction actions, please refer to our Sustainability page on our corporate website <https://australia.kilcoyglobalfoods.com/sustainability/>

## 5.EMISSIONS SUMMARY

### Emissions over time

| Emissions over time |      |                                               |                                            |
|---------------------|------|-----------------------------------------------|--------------------------------------------|
|                     |      | Total tCO <sub>2</sub> -e<br>(without uplift) | Total tCO <sub>2</sub> -e<br>(with uplift) |
| Base Year:          | 2022 | 54,327.25                                     | N/A                                        |

## Emissions summary for CY2024 (true-up)

The electricity summary is available in Appendix B. Electricity emissions were calculated using a **market-based** approach.

The previous report was a projection report using representative data to estimate the emissions for the reporting year. This table shows the differences between projected emissions and actual emissions.

| Emission category                                 | Projection                                |                                         | True-up                                 |                                         |                                                  |
|---------------------------------------------------|-------------------------------------------|-----------------------------------------|-----------------------------------------|-----------------------------------------|--------------------------------------------------|
|                                                   | Total emissions<br>(t CO <sub>2</sub> -e) | Sum of scope 1<br>(tCO <sub>2</sub> -e) | Sum of scope 2<br>(tCO <sub>2</sub> -e) | Sum of scope 3<br>(tCO <sub>2</sub> -e) | Sum of total emissions<br>(t CO <sub>2</sub> -e) |
| Accommodation and facilities                      | 37.48                                     | 0.00                                    | 0.00                                    | 124.99                                  | 124.99                                           |

## 7. RENEWABLE ENERGY CERTIFICATE (REC) SUMMARY

### Renewable Energy Certificate (REC) summary

The following RECs have been surrendered to reduce electricity emissions under the market-based reporting method.

|                                                       |        |
|-------------------------------------------------------|--------|
| <b>1. Large-scale Generation certificates (LGCs)*</b> | 13,460 |
|-------------------------------------------------------|--------|

\* LGCs in this table only include those surrendered voluntarily (including through PPA arrangements), and does not include those surrendered in relation to the LRET, GreenPower, and jurisdictional renewables.

| Project supported by LGC purchase                                 | Project location | Eligible unit type | Registry     | Surrender date | Accreditation code | Certificate serial number | Generation year | Fuel source           | Quantity (MWh) |
|-------------------------------------------------------------------|------------------|--------------------|--------------|----------------|--------------------|---------------------------|-----------------|-----------------------|----------------|
| KILCOY BIOENERGY PROJECT                                          | QLD, Australia   | LGC                | REC Registry | 24/11/2023     | BEBGQL34           | 10274 – 12219             | 2022            | Food processing waste | 1,946          |
| KILCOY BIOENERGY PROJECT                                          | QLD, Australia   | LGC                | REC Registry | 24/11/2023     | BEBGQL34           | 1 -7600                   | 2023            | Food processing waste | 7,600          |
| KILCOY BIOENERGY PROJECT                                          | QLD, Australia   | LGC                | REC Registry | 30/11/2023     | BEBGQL34           | 7601 – 11514              | 2023            | Food processing waste | 3,914          |
| <b>Total LGCs surrendered this report and used in this report</b> |                  |                    |              |                |                    |                           |                 |                       | <b>13,460</b>  |

## APPENDIX A: ADDITIONAL INFORMATION

N/A.

## APPENDIX B: ELECTRICITY SUMMARY

There are two international best-practice methods for calculating electricity emissions – the location-based method and the market-based method. Reporting electricity emissions under both methods is called dual reporting.

Dual reporting of electricity emissions is useful, as it provides different perspectives of the emissions associated with a business's electricity usage.

Location-based method:

The location-based method provides a picture of a business's electricity emissions in the context of its location, and the emissions intensity of the electricity grid it relies on. It reflects the average emissions intensity of the electricity grid in the location (State) in which energy consumption occurs. The location-based method does not allow for any claims of renewable electricity from grid-imported electricity usage.

Market-based method:

The market-based method provides a picture of a business's electricity emissions in the context of its renewable energy investments. It reflects the emissions intensity of different electricity products, markets and investments. It uses a residual mix factor (RMF) to allow for unique claims on the zero emissions attribute of renewables without double-counting.

For the true-up reporting year, electricity emissions have been set by using the **market-based approach**.

| Market-based approach summary                                               |                     |                                   |                               |
|-----------------------------------------------------------------------------|---------------------|-----------------------------------|-------------------------------|
| Market-based approach                                                       | Activity Data (kWh) | Emissions (kg CO <sub>2</sub> -e) | Renewable percentage of total |

| <i>Climate Active carbon neutral electricity is not renewable electricity. These electricity emissions have been offset by another Climate Active member through their electricity product certification. This electricity consumption is also included in the market based and location-based summary tables. Any electricity that has been sourced as renewable electricity by the electricity product under the market-based method is outlined as such in the market-based summary table.</i> |                                                                    |                                   |

## APPENDIX C: INSIDE EMISSIONS BOUNDARY

### Non-quantified emission sources

The following emissions sources have been assessed as relevant, are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. They have been non-quantified due to one of the following reasons:

1. **Immaterial** <1% for individual items and no more than 5% collectively
2. **Cost effective** Quantification is not cost effective relative to the size of the emission but uplift applied.
3. **Data unavailable** Data is unavailable but uplift applied. A data management plan must be put in place to provide data within 5 years.
4. **Maintenance** Initial emissions non-quantified but repairs and replacements quantified.

| Relevant non-quantified emission sources | Justification reason              |
|------------------------------------------|-----------------------------------|
|                                          | CY2024 True-up emissions boundary |
| N/A                                      |                                   |

### Data management plan for non-quantified sources

There are no non-quantified sources in the emission boundary that require a data management plan.

## APPENDIX D: OUTSIDE EMISSIONS BOUNDARY

### Excluded emission sources

The below emission sources have been assessed as not relevant to this organisation's operations and are outside of its emissions boundary. These emissions are not part of the carbon neutral claim. Emission sources considered for relevance must be included within the certification boundary if they meet two of the five relevance criteria. Those which only meet one condition of the relevance test can be excluded from the certification boundary.

Emissions tested for relevance are detailed below against each of the following criteria:

1. **Size** The emissions from a particular source are likely to be large relative to the organisation's electricity, stationary energy and fuel emissions.
2. **Influence** The responsible entity has the potential to influence the reduction of emissions from a particular source.
3. **Risk** The emissions from a particular source contribute to the organisation's greenhouse gas risk exposure.
4. **Stakeholders** Key stakeholders deem the emissions from a particular source are relevant.
5. **Outsourcing** The emissions are from outsourced activities previously undertaken within the organisation's boundary, or from outsourced activities typically undertaken within the boundary for comparable organisations.

| Emission sources tested for relevance         | Size | Influence | Risk | Stakeholders | Outsourcing | Justification                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
